LUDOVICO PFEIFFER, Dr.

CASELLANO.

CASELLIS.

LONDON.

Williams & Norgate, 14,
Henrietta Street, Covent-
Garden.

Sumptibus Theodori Fischer.

1852.

PARIS.

A. Branch, rue Vieille, 67.
Friedr. Altmeyer, rue
de Cille, 11.

Cassellis, typis Theodori Fischer.

P R A E F A T I O.

Quae in libro meo 1847 et 1848 edito „Monographia Heliceorum viventium“ de methodo et ratione scribendi praefatus sum, ea hic repetere non in animo est. Terminologia adoptata, methodus metiendi testas, etc. omnino eadem sunt ac in illo libro, et pariter omnes species, quas non ipse vidi et descripsi, eodem signo „†“ distinxi.

Differentia autem gravis in methodo systematica apparebit. In familia Heliceorum pauca admisi genera, testae solum structura vix sufficienter definita; in ordine Pneumonopomorum, caractere essentiali, illi Pneumonobranchiorum familiae deficiente, operculo organico scil. praedito, methodum recentiorum Auctorum secutus, genera ex operculi substantia et conformatione, una cum testae ipsius characteribus circumscripta admisi. Naturae congruum mihi non videtur, si complectimur in uno eodemque genere animalia, quae construunt operculum *Cyclostomatis volvuli* et *elegantis*, vel (ut de Lamarckianis modo speciebus loquar) *Cycl. mammillaris* et *lincinellae*. Genus *Pupina*, adoptatum a plerisque Auctoribus, qui genus *Cyclostoma* in sensu Lamarckiano servant, difficilius a *Megalomastomate* generice separari potest, quam *Cycl. flavula* a *C. obsoleta* Lam.

At vero gravis determinandi species Cyclostomaceorum difficultas eo exoritur, quod saepe testae in collectionibus servantur vel novae afferuntur operculo destitutae, quare, ut evitare in ipso libro methodum minime scientificam, quam in Monographia Heliceorum adoptare coactus fui, clavem praemisi analyticam omnium specierum in libro descriptarum, in qua operculi nulla fit mentio. Sic comparatis externis testae characteribus loci facile erui possunt, quibus singula testa in Monographia quaerenda est. Quamvis recentiorum collectorum studiis longe maxima pars specierum cognitarum locum fixum in systemate obtineat, multae tamen restant, quae solum ex analogia testarum uni vel alteri generi attributae sunt. Multa, quae in primo ejusmodi conatu (in Zeitschr. f. Malak. 1847. p 104) erronea fuerunt, temporis progressu jam correcta et emendata sunt, et quae ex deficiente operculi cognitione dubia mihi restant, suo loco exacte indicata sunt.

Numerus specierum huc pertinentium indiem accrescit, et multae, quae antea rarissimae fuerunt, nunc in omnium manibus versantur, quare sperandum est, historiam Pneumonopomorum, junctis viribus et studiis, mox ad illam exactitudinem perventuram esse, qua cognitio aliarum familiarum, praesertim ex Ctenobranchiis, jam gaudet.

Quae in libro, Tibi, Benevole lector, nunc exhibito emendanda et addenda erunt, Deo favente postea in Supplemento proponentur.

Cassellis mense Augusti 1852.

Dr. L. Pfeiffer.

Clavis analytica

omnium Cyclostomaceorum,

in Monographia descriptorum.

I Testa depressa vel discoidea.

- A. Peristomate superne alatim dilatato Pterocyclos 72—87.
- B. Peristomate superne non alato,
- a. recto,
- α . tenui.
- * Anfractu ultimo antice soluto Cyclotus 37—40. Aulopoma 90—92.
Cyclophorus 177.
- ** Anfractu ultimo non soluto.
1. Spiraliter striata vel sulcata Cyclophorus 162—169. Lithidion 297.
Otopoma 299.
2. Oblique rugulosa aut fo-
veolata Cyclotus 29. 30. 32. 34. 43—45. 47.
Cyclophorus 170—172.
3. Simpliciter striata . . . Cyclotus 27. 28. 31. 48. Cyclophorus
173. 174. 176.
- β . incrassato Cyclophorus 159—161. Cyclostomus
317.
- b. expanso,
- α . simplice.
1. Striata Cyclotus 58. 59.
2. Spiraliter sulcata vel lirata Cyclotus 53—56. Cyclophorus 156.
157. Cyclostomus 342. 343.
3. Distincte carinata . . . Lithidion 298. Cyclostomus 314—316.
319—321.
- β . incrassato.
1. Striata Alycaeus 208.
2. Spiraliter lirata . . . Cyclophorus 152—155. Lithidion
294—296.
- γ . duplice.

1. Laevigata Cyclotus 63. 68. 69. Cyclophorus 158.
2. Striata Cyclotus 62. 64—67. 70. 71. Choanopoma 278. 279.
3. Acute carinata Cyclotomus 318.
4. Decussata Choanopoma 280. 281.

II. Testa turbinato-depressa.

A. Peristomate simplice recto.

1. Simpliciter striata Cyclotus 33. 35. 49—51 Cyclophorus 140. 147.
2. Oblique rugata Cyclotus 41. 42. 46.
3. Spiraliter sculpta Cyclotus 36. Cyclophorus 144.

B. Peristomate incrassato vix expansiusculo.

a. Margine sinistro in appendicem

- distinctam dilatato Cyclophorus 132. 134—136.

b. Margine sinistro subsimplice.

1. Umbilico simplice Cyclophorus 101. 102. 126. 141.
2. Umbilico subcarinato Cyclophorus 149.

C. Peristomate simplice expanso.

a. Ecarinata.

1. Margine sinistro dilatato Cyclotus 52. Cyclophorus 137. Otopoma 300. 301.
2. Margine sinistro simplice Cyclophorus 95—98.

b. Subcarinata.

1. Spiraliter lirata Cyclophorus 109. 119. 121.
2. Sublaevigata Cyclophorus 94. 104. 107. 115. 125.

c. Carinata.

1. Peristomate continuo Cyclophorus 106. 108.
2. Marginibus subdisjunctis Leptopoma 190. 191.

D. Peristomate expanso duplicato.

1. Sublaevigata Cyclotus 61. Cyclophorus 113. 117.
2. Concentrice sculpta Cyclophorus 100. 112. 118. 122. 130.

III. Testa globoso-turbinata.

A. Peristomate continuo.

a. Anfractu ultimo non soluto.

α . Peristomate recto,

1. simplice Craspedopoma 89. Otopoma 311. Cyclotomus 368. 372.
2. incrassato Cyclophorus 127.

β . Peristomate expansiusculo Cyclotus 60. Otopoma 310. Cyclotomus 335. 367.

γ . Peristomate expanso,

- * *simplice* Cyclophorus 105. 110. Cyclostomus 324. 350.
- ** *incrassato* Cyclophorus 93. 123. 124. Cyclostomus 354.
- *** *uplicato*
- † *Ecarinata*.
 - 1. *Laevigata* Cyclophorus 99. 103. Choanopoma 275. Cistula 425.
 - 2. *Longitudinaliter plicata* . Chondropoma 487.
 - 3. *Decussata* Jamaica 256. Choanopoma 267—271. 273. 276.
- †† *Carinata* Cyclophorus 114. 120. 133. Choanopoma 266.
- b. *Anfractu ultimo antice soluto*.
 - α. *Peristomate recto*.
 - 1. *Laevigata* Craspedopoma 88.
 - 2. *Spiraliter striata* . . . Cyclostomus 371. Cistula 427.
 - 3. *Longitudinaliter plicata* . Cistula 428.
 - 4. *Decussata* Jamaica 255.
 - β. *Peristomate expanso*.
 - 1. *Spiraliter striata* . . . Cistula 426.
 - 2. *Decussata* Choanopoma 272. 274. 277.
- B. *Peristomatis marginibus callo lunatim exciso junctis*.
 - a. *Ecarinata*.
 - 1. *Sublaevigata* Otopoma 313. Cyclostomus 345. 346. 349. 353. 369.
 - 2. *Spiraliter sulcata* . . . Cyclophorus 139. Cyclostomus 332. 347. 348. 355. 370.
 - 3. *Decussata* Cyclostomus 333. 344. 352.
 - b. *Unicarinata* Cyclostomus 340. 341.
 - c. *Pluricarinata* Cyclostomus 322. 323. 325—328. 334.
- C. *Peristomate interrupto*.
 - a. *Marginibus callo brevi junctis*.
 - * *Peristomate recto*,
 - 1. *subincrassato* Otopoma 302—304.
 - 2. *tenui*. Otopoma 305. 306. 308. 309. 312. Cyclostomus 351. Omphalotropis 514.
 - ** *Peristomate expanso*.
 - † *Laevigata* Cyclophorus 150. Cyclostomus 366.
 - †† *Spiraliter sculpta*
 - 1. *Ecarinata* Cyclophorus 148. Otopoma 304. Cyclostomus 357. 358.
 - 2. *Subcarinata* Cyclostomus 57. Cyclophorus 111. 116. 131. Cyclostomus 337. 338. 356. 365.

3. Carinata Cyclophorus 129. 146. Cyclostomus 329. 336
- b. Marginibus distantibus.
- * Peristomate recto Leptopoma 203—206.
- ** — expanso,
- † simplice incrassato Leptopoma 189. Bourciera 517.
- †† simplice tenui.
1. Ecarinata Leptopoma 178—183.
2. Subcarinata Leptopoma 184. 186—188. 194.
3. Carinata Leptopoma 192. 193.
- ††† duplicato Leptopoma 185.

IV. Testa trochiformis.

- A. Anfractu ultimo vix angulato Cyclophorus 128. 138. 151.
- B. Unicarinata Leptopoma 196—200.
- C. Pluricarinata Cyclostomus 330. 331.

V. Testa elongato-turbinata.

- A. Peristomate recto.
1. Basi carinata Omphalotropis 509—513. 515.
2. Basi non carinata Cyclophorus 142. 143. 145. Cyclostomus 339. 360. 362. 363. 380—518.
- B. Peristomate expanso.
1. Ecarinata Cyclostomus 359. 361. 364. Omphalotropis 516—521.
2. Carinata Leptopoma 195. 201. 202.
- C. Peristomate duplicato Alycaeus 207.

VI. Testa pupaeformis.

- A. Imperforata.
1. Perist. basi lateris columnellaris inciso Pupinella 239.
2. — medio lat. colum. inciso Registoma 248—253.
3. — bicanaliculato Pupina 240—247.
4. — integro Callia 254.
- B. Rimata vel subperforata.
- a. Perist. basi canaliculato Cataulus 233—238.
- b. — integro continuo,
1. recto Megalomastoma 214.
2. expanso incrassato Megalomastoma 215—224.
3. expanso subtenui, plerumque duplicato Megalomastoma 225—232.

- c. Perist. integro interrupto . . . Diplommata 210—213.
 C. Pervie perforata vel umbilicata.
 Anfractu ultimo non soluto Adamsiella 282—286.
 2 Anfractu ultimo soluto . Adamsiella 287—289.

VII. Testa ovato-turrita.

A. Peristomate simplice,

a. recto.

α. Anfractu ultimo non soluto

1. Punctata Leonia 424.
2. Longitudinaliter striata . Cyclostomus 375. Tudora 401.

| Aufractu ultimo carina umbilicali munito | Cyclostus Jamaicensis et affines, Cyclophorus euomphalus, Cataulus, Omphalotropis (et Stoastoma). |
| Umbilico clauso | Cyclophorus turbo, ictericus, Leptopoma minutissimum, Otopoma clausum, Cyclostomus bicarinatus, zonatus, Choanopoma pudicum, Tudora ovata, pupoides, Chondropoma Shuttleworthi, Ottonis, Bourciera. |

MONOGRAPHIA

PNEUMONOPOMORUM VIVENTIIUM

Introductio.

Pneumonopoma sive *Pneumopoma* dicuntur Mollusca terrestria aërem per organa pulmonibus analoga spirantia et operculo organico, pedi animalis affixo, pede retracto testam spiralem claudente, munita.

Animalia hujus ordinis omnia structura valde simili gaudent, qua praeter operculum facile a reliquis molluscis terrestribus (Limaceis, Heliceis, Auriculaceis veris) distinguuntur. Sunt nempe sexus distincti (nec unquam Hermaphrodita, sicut Helicea), et tentaculis 2 contractilibus (non retractilibus) praedita, ad quorum basin posticam vel externam oculi positi sunt. Pallium in nonnullis margine libero praeditum est (quo signo Cl. Férussac familiam Helicinarum a Turbicinis distinxit), in aliis testa omnino absconditum.

Ordo Molluscorum, quem hic tractaturi sumus, primum a Cl. Férussac 1821 (Tabl. syst. p. XXXIII.) tamquam quintus Gasteropodorum ordo sub nomine *Pulmonatorum operculatorum* propositus est ad conjungenda duo genera: *Cyclostoma* et *Helicinam*, quorum intima affinitas naturalis a praecedentibus auctoribus, immo Cl. Cuvier et Lamarck plane neglecta fuerat. Utrumque hocce genus Férussacio typum propriae familiae: *Helicinarum* et *Turbicinarum* sistit.

Cl. Latreille 1825 (Fam. nat. Ed. germ. p. 176.) primum ordinem Gasteropodorum dioicorum nomine *Pneumoporum* designavit, quem, similiter ac Férussac, in familiam *Helicinidarum* et *Turbicinarum* divisit.

Idem ordo Cl. Menkeo 1828 (Syn. p. 22.) sextus Gasteropodorum est, nomine *Coelopneumonatorum operculatorum* designatus, et in familias *Helicinacearum* et *Cyclostomiatarum* divisus. In altera ejusdem operis editione (1830. p. 39) nomina: *Coelopnoa operculata* et, pro familiis, *Helicinacea* et *Cyclostomacea* prioribus substituta sunt.

Cl. Deshayes 1830 (Encycl. méth. III. p. 552. Tabl.) designationem *Helicineorum* (*Les Hélicinés*) pro tertia Pulmobranchiatorum familia, genera: *Cyclostoma*, *Strophostoma* et *Helicinam* complectente, proposuit.

Cl. Wiegmann 1832 (Handb. d. Zool. p. 527. Ed. sec. p. 555.) ordinem nostrum tamquam familiam Pulmonatorum nomine abbreviato *Operculatorum* tractavit, genera ei adscribens: *Cyclostoma*, *Helicinam*, *Steganotomam* et *Pupinam*.

Cl. Anton 1839 (Verzeichn. p. XIII. 52.) nomine *Cyclostomaceorum* familiam designat, praeter *Cyclostoma* et *Helicinam* etiam *Littorinam* minus bene complectentem.

Cl. Hartmann 1840 (Erd- u. Süßw. Gast. Syst. Uebers.) nom. *Pseudobranchiatorum* seu *Teleogeophilorum* genera *Choristoma*, *Pomatiatem* et *Cyclostoma* conjunxit, cui sectioni *Helicina* certe adscripta fuisset, si generum non in Europa obviorum mentio facta esset.

Sectio *Pneumonobranchiatorum operculatorum* a Cl. Gray 1840 (in Turt. Man. Ed. sec. p. 273) proposita, etiam nostro ordini congrua est, etsi illo loco solum familia *Cyclostomidarum* tractata sit.

Cl. D'Orbigny 1841 (Moll. Cub. I. p. 199. 236.) in prima familia Pectinibranchiatorum dioicorum *Cyclostomidas* admittit, cui genera: *Odontostoma* (ad *Helicea* potius referendum), *Helicina*, *Cyclostoma* et *Strophostoma* subjunguntur.

Cl. Reeve 1842 (Conch. syst. II. p. 90.) nomine *Cyclostomaceorum* eundem ordinem designavit, admittens inter ejus genera praeter *Pupinam*, *Cyclostoma* et *Helicinam* etiam *Truncatellam*; quam methodum secuta est Cl. A. Catlow 1845. (Conch. Nom. p. 168.)

Cl. Sismonda 1842 (Syn. an. inv. p. 27.) nomine *Cyclostomatum*, tamquam Gasteropodorum sectionis, *Cyclostoma* et *Helicinam* complectitur.

Cl. Jay 1850 (Catal. of Shells p. 251.) familiam *Cyclostomaceorum* statuit, cujus genera sunt: *Pupina*, *Truncatella*, *Cyclostoma*, *Geomelania*, *Helicina*, *Stoastoma*.

Dividendus videtur ordo Pneumonopomorum ex animalium structura externa, nempe positione oculorum, in subordines duos: *Opisophthalma* (Auriculaceis affinia) et *Ectophthalma*.

SUBORDO I.

Opisophthalma.

Oculi in parte supra capitis pone basin tentaculorum subulorum positi; pes breviusculus. Unica familia:

Fam. I. Aciculacea.

Character subordinis. — Operculum tenue, spiratum, anfractibus paucis.

Aciculidae Gray 1850. Catal. Cycloph. p. 67.

Genera huc referenda videntur duo: *Acicula* sc. et *Geomelania*, quorum prius, antequam operculum notum fuit*), Carychio et affinibus adnumeratum erat. — *Truncatella* Risso, testae characteribus illis persimilis, immo ratione vivendi amphibibia ad genera terrestria accedens, tamen ex recentioribus observationibus Ctenobranchiis potius adnumeranda est.

I. Acicula Hartmann.

Operculum tenuissimum, hyalinum, paucispirum. Testa subimperfiorata, subcylindrica; peristoma subincrassatum, marginibus subparallelis, callo tenui junctis.

Acicula Hartm. 1821 in Steinm. Neue Alpina I. p. 205. 215.

— *Pfr.* 1841 in Wieg. Arch. f. Nat. I. p. 225; in Chemn. ed. sec. I. 19. p. 7. 209; Zeitschr. f. Mal. 1847. p. 111.

Pupula lineata var. *Banatica* Rossm. Icon. XI. p. 12. t. 53. f. 736.

γ. Minor, gracilior, pallide fusca.

Habitat in Germania (prope Cassellam et Hofgeismar Hassiae, ad rupem Hübichenstein Hercyniae), prope Nyon (Hartmann). Var. β (forsan propria species?) a Cl. Frivaldsky in Banatu, var. γ prope Karfreid in valle Isontii una cum *Acicula spectabili*, *Pupa Rossmässleri*, *doliolo*, *pagodula* etc. a me lecta est.

*) T. imperforata, cylindrica, apice attenuato, obtuso, fusco-succinea, nitida, striis longitudinalibus, parallelis distantibus; anfr. $6\frac{1}{2}$ — 7 planiusculis; apertura acute semiovata; perist. obtusato, extus callo purpureo cincto. — Alt. $3\frac{1}{2}$, lat 1 mill. (Hartm. l. c.)

**) T. cylindrica, oblonga, obtusa, pellucida, nitida; apertura ovata, edentula; labro exterius marginato. — Long. $1\frac{1}{3}$, lat. $\frac{2}{3}$ lin. (C. Pfeiffer l. c.)

***) T. pygmaea, imperforata, cylindrica, apice attenuato, obtuso, nitidissima, fusca, anfractibus 5 planiusculis; apertura acute semiovata; peristomate obtusato, extus callo concolore cincto. — Alt. $1\frac{1}{4}$, lat. $\frac{1}{3}$ lin. (Rossm. l. c.)

†) T. imperforata, cylindrica, apice attenuato, obtuso, fusco-succinea, nitidissima, tota glabra; anfr. 6 planiusculis; apertura acute semiovata; perist. obtusato, extus callo purpureo cincto. — Alt. $2\frac{2}{3}$, lat. vix 1 mill. (Hartm. l. c.)

3

3. **A. Simoniana Charpentier.**

T. minima, subperforata, cylindraceo-turrita, laevigata, nitida, corneo-albida; spira elongata, obtusiuscula; anfr. 7 convexi, ultimus vix $\frac{1}{4}$ longitudinis aequans; apertura verticalis, truncato-ovalis; perist. subincrassatum, marginibus callo junctis, dextro subrependo, columellari breviter reflexo. — Operc.? — Long. vix 2, diam. $\frac{1}{2}$ mill. (Coll. Küster.)

Pupula Simoniana Charp. mss.

Acicula Simoniana Pfr. in Zeitschr. f. Malak. 1850. p. 63.

Habitat in Gallia. Testae inanes a Cl. de Saint-Simon in alluvie fluvii Garonne prope Toulouse lectae sunt.

Obs. Differt a praecedentibus anfractibus multo convexioribus et in testa minore numerosioribus, etc.

4

4. **A. spectabilis Rossmässler.**

T. cylindraceo-turrita, obtusa, solidula, confertim costulata, nitida, cornea; anfr. 7 convexiusculi, ultimus $\frac{2}{7}$ longitudinis subaequans; apertura subverticalis, oblique semiovalis; perist. extus incrassatum, marginibus remotis, callo tenui junctis, columellari brevi, dextro medio antrorsum sinuato. — Operc. normale. — Long. $5\frac{2}{3}$, diam. $1\frac{1}{2}$ mill. Ap. $1\frac{1}{3}$ mill. longa. (Coll. Nr. 3.)

Carychium spectabile Rossm. Icon. X. p. 36. t. 49. f. 659. *).

Acicula spectabilis Pfr. in Wiegmann. Arch. 1841. I. p. 226; Zeitschr. f. Malak. 1847. p. 111.

— — *Chemn.* II. p. 210. t. 30. f. 29—31.

Pupula spectabilis Rossm. Ic. XI. p. 12.

— — *F. Schmidt* Krain. Moll. p. 15.

Truncatella spectabilis Held Wassermoll. Bayerns p. 22.

Habitat rarissima in Carniolia et provincia Austriae littorali. Detecta est ab amicissimo F. Schmidt Labacensi in Monte Nanos, tum a me in valle Isontii (haud procul ab oppido Caporeto), a Schmidt serius in Carniolia inferiore et a Kokeil prope Ober-Laibach.

5

5. **A. striata Quoy et Gaimard. †**

T. longe turriculata, cylindracea, truncata, fulva, longitrorsum valde canaliculata; anfr. 6—7 subobliqui; apertura

*) T. cylindraceo-turrita, obtusa, cornea subtiliter costulata; apertura oblique semiovalata; perist. producto, extus callo laevigato cincto. — Alt. $2\frac{1}{2}$, lat. $\frac{4}{5}$ lin.; anfr. 7. (Rossm. l. c.)

subovalis; perist. crassum, non reflexum; operculum ovale. paucispirum, tenue, pallidum. — Long. 3 lin. (Q. et G.)

Cyclostoma striata Quoy et Gaim. Voy. Astrol. II. p. 186. t. 12. f. 27—30.

Truncatella Quoyi Pfr. in Zeitschr. f. Mal. 1846. p. 187.

Acicula striata Gray Catal. Cycl. p. 68. N. 3.

Habitat in insula Vanikoro.

II. Geomelania Pfr.

Animal sicut Aciculae (teste Gray). — Operculum membranaceum, pellucidum, ovale, anfractibus paucis rapidissime accrescentibus, nucleo basali. — Testa imperforata, turrata; apertura integra, effusa; peristoma simplex, expansum, marginibus junctis, basali in appendicem sublinguaeformem producto.

Geomelania Pfr. in Proc. Zool. Soc. 1845. p. 45; Z. f. M. 1847. p. 111;

1849. p. 115; Chemn. ed. II. Cycl. p. 213.

— *Adams* Contrib. to Conch. N. 2. p. 17.

— *Gray* Catal. Cycloph. p. 68.

1. *G. Jamaicensis* Pfr.

6

T. turrata, truncata, solidula, arcuatim et subconferte costata, parum nitens, alba; anfr. 6—7 convexiusculi, ultimus basi subangulatus, fere $\frac{1}{6}$ longitudinis formans; apertura subverticalis, ovalis; perist. continuum, marginibus superne angulatim junctis, dextro et basali intus incrassatis, subreflexis, columellari appresso; appendix linguaeformis acuta, porrecta. — Long. 12—14, diam. $3\frac{1}{2}$ mill. (Coll. Nr. 4.)

Geomelania Jamaicensis Pfr. in Proc. Zool. Soc. 1845. p. 45.

— — Chemn. ed. II. Cycl. p. 214. t. 30. f. 19. 20.

— — *Adams* Contrib. to Conch. N. 2. p. 18. *).

— — *Gray* Cat. Cycloph. p. 68.

Habitat in insula Jamaica.

*) Shell conic-cylindrical, whitish; densely sculptured with strong transverse somewhat angular ribs, which become obsolete only at the anterior extremity of the last whorl; spire with rectilinear outlines; apex truncate; nearly 7 whorls remaining, rather convex, with a well impressed suture; aperture ovate, widely and deeply effuse; labrum much thickened, reflected, very much produced in the lower part; labium rather thick, separated by a slight groove from the penultimate whorl, separated above from the labrum by a small sinus. — Mean diverg. 16° . (Adams l. c.)

2. **G. minor Adams.**

T. turrita, truncata, tenuiuscula, confertim et arcuatim costato-striata, hyalino-alba; anfr. 7 convexi, ultimus $\frac{1}{4}$ longitudinis paulo superans; apertura ovali-subtriangularis; perist. tenue, vix expansum, marginibus callo junctis, dextro et basali repandis; appendix linguaeformis obtusa. — Long. $10\frac{1}{2}$, diam. 3 mill. Ap. fere 3 mill. longa, basi 2 lata. (Coll. Nr. 5.)

Geomelania minor Adams Contrib. to Conch. N. 2. p. 18. *).

— — *Chemn.* ed. II. Cycl. p. 214. t. 30. f. 21. 22.

Habitat in insula Jamaica.

Obs. Differt a praecedente anfractibus angustioribus, convexioribus, costis subtilioribus, confertioribus, peristomate vix expanso, appendice linguaeformi obtusa.

3. **G. fortis Adams. †**

Testa elongato-conica, albida; spira rectilinearis; apex truncatus amissis circa 8 anfractibus; anfr. superst. 7, modice convexi, costis circa 36 subtilibus, perarcuatis sculpti; sutura bene impressa; apertura ovata, late et profunde effusa; labrum expansum et reflexum, parte linguaeformi in extremitate antica, oblique et deorsum valde producta, angusta, acuta; labium incrassatum, ab anfr. penultimo subdisjunctum. — Long. 0,6; lat. max. 0,18; lat. min. 0,15 poll. (Ad.)

Geomelania fortis Adams Contrib. to Conch. N. 6. p. 94.

Habitat in insula Jamaica.

4. **G. magna Adams. †**

Testa elongato-conica, albida; spira rectilinearis; apex truncatus amissis 8 anfractibus; anfr. superst. $6\frac{1}{2}$, modice convexi, costis circa 38 subtilibus, perarcuatis sculpti; sutura bene impressa; apertura ovata, late et profunde effusa; labrum bene expansum et reflexum, parte linguaeformi in extremitate antica lata et obtusa, oblique et lateraliter producta; labium incrassatum, ab anfractu penultimo leviter separatum. —

*) This may be only a variety of the preceding (*G. Jamaicensis*), but the dimensions given below are those of the largest, among several hundreds, which we have seen. The most essential difference is in the aperture, which is but slightly effuse; the labrum is throughout much expanded convexly, and is by no means so disproportionately produced in the lower part. The apex is truncate with the loss of 6 or 7 whorls. — Mean divergence 14 to 15°; length 0,41; greatest breadth 0,13, least br. 0,14 inch. (Adams l. c.)

Long. 0,65; lat. max. 0,19; lat. min. 0,15 poll.; long. partis amissae 0,22 poll. (Ad.)

Geomelania magna Adams Contrib. to Conch. N. 6. p. 94.

Habitat in insula Jamaica.

5. *G. procera* Adams. †

10

T. gracilis, conico-cylindrica, albida, costis circa 30 validis, prominentibus, fere ad marginem anticum continuatis, lineisque numerosissimis microscopicis, leviter impressis in spatiis intercostalibus sculpta; spira rectilinearis; apex truncatus, amissis 7—8 anfractibus; anfr. superst. 7—7½, modice convexi; sutura bene impressa; apertura ovata, late et profunde effusa; labrum bene expansum, reflexum et incrassatum, parte linguaeformi in extremitate antica oblique et deorsum producta, angusta, non acuta; labium incrassatum, ab anfr. penultimo leviter separatum. — Long. 0,63; lat. max. 0,15; lat. min. 0,13 poll. (Ad.)

Geomelania procera Adams Contrib. to Conch. N. 6. p. 95.

Habitat in insula Jamaica.

6. *G. gracilis* Adams. †

11

T. similis *G. procerae*, sed costis subtilioribus et numerosioribus (circa 40 in quovis anfractu), magis minusve inaequidistantibus, striis spiralibus sub lente obsoletis; apex truncatus, amissis 8 anfractibus; pars linguaeformis labri subacuta, oblique et lateraliter valde producta in extremitate infera lateris dextri; labium et labrum aequaliter crassa. — Long. 0,55; lat. max. 0,13; lat. min. 0,11 poll. (Ad.)

Geomelania gracilis Adams Contrib. to Conch. N. 6. p. 95.

β. Minor, costis circa 36; long. 0, 35 poll.

Habitat in insula Jamaica.

7. *G. typica* Adams. †

12

T. gracilis, conica, albida, costis 26—30 prominentibus, acute marginatis, prope extremitatem anticam obsoletis, striisque numerosissimis leviter impressis spiralibus, costas non transgredientibus sculpta; spira rectilinearis; apex truncatus, amissis 7—8 anfractibus; anfr. superst. 7, modice convexi; sutura bene impressa; apertura ovata, late et profunde effusa; labrum expansum, modice incrassatum, parte linguaeformi in extremitate antica lateris dextri, oblique valde producta, perangusta, subacuta; labium incrassatum, subreflexum et praeter

extremitatem superam ab anfractu penultimo separatum. — Long. 0,47; lat. max. 0,125; lat. min. 0,11 poll. (Ad.)

Geomelania typica Adams Contrib. to Conch. N. 6. p. 95.

β. Var. *pygmaea*: long. 0, 3 poll.

Habitat in insula Jamaica.

13

8. *G. expansa* Adams. †

T. valde elongata, conica, albida, costis subconfertim sculpta validis subarcuatis, antice subplanulatis, minus regularibus quam in *G. minore*, et obsoletis in dimidio antico anfractus ultimi; spira rectilinearis; apex truncatus; anfr. superst. fere 7, modice convexi; sutura bene impressa; apertura ovata, lateraliter valde expansa, antice late et subprofunde effusa; labrum leviter incrassatum, superne subreflexum, basi magis reflexum et dilatatum; labium tenuiusculum, in concavitatem regionis centralis anfractus penultimi appresse subreflexum. — Long. 0,53; lat. max. 0,185; lat. min. 0,15 poll. (Ad.)

Geomelania expansa Adams Contrib. to Conch. N. 2. p. 18.

Habitat in insula Jamaica.

14

9. *G. affinis* Adams. †

T. similis *G. expansae*, apertura antice perprofunde effusa et parte linguaeformi labri angusta, oblique valde producta; apex truncatus amissis circa 7 anfr. — Dimens. fere praecedentis.

Geomelania affinis Adams Contrib. to Conch. N. 6. p. 96.

Habitat in insula Jamaica.

15

10. *G. media* Adams. †

T. subcylindrica, albida, costis circa 35 perarcuatis, prominentibus, acute marginatis subtilibus sculpta; spira rectilinearis; apex truncatus; anfr. superst. 6, modice convexi; sutura bene impressa; apertura ovata, late effusa; labrum modice expansum et incrassatum, parte linguaeformi in extremitate antica lateris dextri, oblique distincte producta, subangusta, subacuta; labium incrassatum, praeter extremitatem superam ab anfr. penultimo subdisjunctum. — Long. 0,4; lat. max. 0,107; lat. min. 0,1 poll. (Ad.)

Geomelania media Adams Contrib. to Conch. N. 6. p. 96.

Habitat in insula Jamaica.

11. *G. vicina* Adams. †

16

T. similis *G. minori*, divergentia majore distincta, testa plerumque tenuiore, parte linguaeformi lateraliter valde producta, latissima, peripheria anfractus ultimi magis angulata. — Dimens. ut *G. minoris*.

Geomelania vicina Adams Contrib. to Conch. N. 6. p. 96.

Habitat in insula Jamaica.

* * *

12. *G. Hilliana* Adams. †*)

17

T. conico-cylindrica, alba, costis 33—35 parvulis, obtusis, antice et pone labrum obsoletis, sculpta; spira rectilinearis; apex truncatus; anfr. superst. 6 perconvexi; sutura profunda; apertura suborbicularis, modice effusa; labrum bene expansum et reflexum, tenue, parte linguaeformi oblique et lateraliter modice producta, obtusa; labium incrassatum, regulariter reflexum, ab anfractu penultimo leviter disjunctum. — Long. 0,25; lat. max. 0,085; lat. min. 0,07 poll. (Ad.)

Geomelania Hilliana Adams Contrib. to Conch. N. 9. p. 159.

Habitat in insula Jamaica.

13. *G. exilis* Adams. †

18

T. perelongata, conico-cylindrica, albida, costis circa 35 subtilibus, strictis, et striis numerosis subtilibus spiralibus, costas non secantibus sculpta; spira rectilinearis; apex truncatus; anfr. superst. 7 convexi; sutura profunda; apertura late ovata, ampliter subeffusa; labrum leviter expansum et reflexum, parte linguaeformi partem inferam occupante, vix producta; labium incrassatum et reflexum, omnino separatum ab anfractu penultimo. — Long. 0,27; lat. max. 0,064; lat. min. 0,056 poll. (Ad.)

Geomelania exilis Adams Contrib. to Conch. N. 6. p. 97.

Habitat in insula Jamaica.

* * *

*) Huic speciei in catalogo Adamsiano (Apr. 1851) praecedit *G. minor*, novam sectionem inchoans.

19

14. **G. pauperata Adams. †**

T. elongato-conica, albida, costis circa 25 ampliusculis obtusis sculpta; spira rectilinearis; apex truncatus; anfr. superst. 7—8, convexi; sutura bene impressa; apertura ovata, subeffusa; pars linguaeformis labri leviter producta. — Long. 0,21; lat. 0,05 poll. (Ad.)

Geomelania pauperata Adams Contrib. to Conch. N. 6. p. 97.

Habitat in insula Jamaica.

20

15. **G. Beardsleana Adams. †**

T. regulariter conica, valde elongata, albida, costulis confertis obtusis, non obliquis sculpta, antice non carinata; spira rectilinearis; apex truncatus amissis 6 anfractibus; anfr. superst. 8 convexi; sutura profunda; anfr. ultimus subdisjunctus, superne angulatus; labrum acutum, parte anfractui penultimo opposita reflexum, reliquis vix reflexum. — Long. 0,3, lat. 0,07 poll. (Ad.)

Cylindrella Beardsleana Adams Contrib. to Conch. N. 2. p. 19.

Geomelania Beardsleana Adams ibid. N. 6. p. 89.

Habitat in insula Jamaica.

Obs. Operculum hujus speciei Cl. Chitty observavit, teste Adams.

21

16. **G. pygmaea Adams.**

T. minuta, turrita, subtruncata, confertim substrictè costulato-striata, diaphana, albida; anfr. superst. 7 convexi, regulariter lente accrescentes; apertura vix obliqua, ovalis, subeffusa; perist. breviter expansum, marginibus callo subsoluto junctis, dextro subdilatato, parte linguaeformi obsoleta. — Long. $4\frac{1}{2}$, diam. vix 1 mill. Ap. $\frac{2}{3}$ mill. longa. (Coll. Nr. 6.)

Cylindrella pygmaea Adams in Proc. Bost. Soc. 1845. p. 14.

— — *Pfr. Mon. Helic.* II. p. 386. N. 49.

Geomelania pygmaea Adams Contrib. to Conch. N. 6. p. 89.

Habitat in insula Jamaica.

Obs. Haec species Truncatellarum quarundam juniorum faciem offert.

*

*

*

22

17. **G. conica Adams. †**

T. elongato-conica, albida, costis 30—35 gracilibus, modice arcuatis sculpta; spira rectilinearis; apex truncatus,

amissis 5 anfractibus; anfr. superst. 7, modice convexi; sutura bene impressa; apertura ovata, subampliter effusa; labrum subexpansum et reflexum, parte linguaeformi in parte infera lateris dextri oblique valde producta, acuta. — Long. 0,39; lat. max. 0,09; lat. min. 0,08 poll. (Ad.)

Geomelania conica Adams Contrib. to Conch. N. 6. p. 97.

Habitat in insula Jamaica.

18. *G. pyramidata* Adams. †

23

T. elongato-conica, albida, costulis circa 28 obtusis, in anfractu ultimo paulo infra peripheriam evanescentibus sculpta; spira rectilinearis; apex plerumque truncatus, amissis 2—3 anfractibus; anfr. superst. 7—8 convexi; sutura profunda; apertura ampliter ovata, modice effusa; labrum tenuiusculum, subreflexum, parte linguaeformi obtusa, in parte infera lateris dextri modice lateraliter producta; labium subincrassatum et reflexum. — Long. 0,32; lat. max. 0,11; lat. min. 0,09 poll. (Ad.)

Geomelania pyramidata Adams Contrib. to Conch. N. 9. p. 159.

Habitat in insula Jamaica.

* * *

19. *G. costulosa* Adams. †

24

T. conico-cylindrica, albida, costis circa 40 gracillimis, subarcuatis, basi dilatatis, ad marginem aperturae continuatis, paucisque striis spiralibus, inaequidistantibus leviter impressis sculpta; spira rectilinearis; apex truncatus; anfr. superst. 6½; sutura profunda; apertura ovata, ampliter effusa; labrum modice reflexum et incrassatum, parte linguaeformi in parte infera lateris dextri obtusissima et lateraliter producta; labium incrassatum, ab anfr. penultimo late disjunctum. — Long. 0,37; lat. max. 0,115; lat. min. 0,1 poll. (Ad.)

Geomelania costulosa Adams Contrib. to Conch. N. 6. p. 96.

Habitat in insula Jamaica.

20. *G. striosa* Adams. †

25

T. conico-cylindrica, albida, costis circa 16 gracillimis subarcuatis, striisque 25—30 spiralibus subtilibus, costas superantibus sculpta; spira rectilinearis; apex truncatus; anfr. superst. 7 modice convexi; sutura profunda; apertura ovata,

ampliter et profunde effusa; labrum expansum, reflexum, incrassatum, parte linguaeformi in parte infera lateris dextri obtuse et oblique subproducta; labium incrassatum, ab anfractu penultimo praeter extremitatem superum subdisjunctum. — Long. 0,38; lat. max, 0,085; lat. min. 0,08 poll. (Ad.)

Geomelania striosa Adams Contrib. to Conch. N. 6. p. 96.

Habitat in insula Jamaica.

21. *G. elegans* Adams. †

T. valde cylindrica, albida, costis distantibus, prominentibus, gracilibus, striisque spiralibus numerosissimis (circa 20 in quovis anfractu) eleganter sculpta; spira fere rectilinearis; apex truncatus; anfr. superst. 7 convexi; sutura profunda; apertura ovata, modice effusa; labrum subincrassatum et reflexum, parte infera parum productum; labium prominens, crassiusculum, praeter parvum sinum, quo jungitur labro, ab anfractu penultimo subdisjunctum. — Long. 0,3; lat. max. 0,08; lat. min. 0,07 poll. (Ad.)

Geomelania elegans Adams Contrib. to Conch. N. 2. p. 18.

Habitat in insula Jamaica.

SUBORDO II.

Ectophthalma.

Oculi in parte laterali capitis ad basin externam tentaculorum positi; pes subelongatus. Operculum corneum vel testaceum, vel distincte spiratum, vel non spiratum, nec concentricè striatum. Distinguantur hoc ultimo caractere familiae duae: *Cyclostomacea* et *Helicinacea*.

Fam. I. Cyclostomacea.

Operculum distincte spiratum, testaceum, cartilagineum vel corneum, anfractibus permultis subaequalibus vel paucis rapide crescentibus. Reliqui characteres subordinis.

Cyclophoridae Gray 1847. Proc. Zool. Soc. p. 181; 1850. Cat. Cycloph. p. 5.

Haec familia auctoribus diu pro unico genere Cyclostomate Lam. exstitit, donec ex accuratiore novarum specierum eorumque operculorum cognitione necessitas constiterit, ab initio pauca, sensim plura genera ab eo separandi, quae suo loco enumerabuntur vel inter synonyma citanda erunt.

Sicut 1851 in Conspectu emendato generum et specierum Cyclostomaceorum (p. 3. Conf. Zeitschr. f. Mal. 1851. p. 131.) exposui, ex formatione operculorum tres series generum primarie distingui possunt, et quaevis series iterum ex operculorum substantia et testarum characteribus varios typos generum magis minusve exacte definiendorum offert.

Quare eandem methodum ac in Conspectu servans, sequentia Cyclostomaceorum genera adoptavi:

Series prima. Operculum circulare, saepe extus concavum, anfractibus multis lente accrescentibus formatum, nucleo centrali.

I. Operculum testaceum. Genera: *Cyclotus*, *Alycaeus*, *Diplommatina*.

II. Operculum cartilagineum. Genus: *Pterocyclos*.

III. Operculum corneum. Genera: *Craspedopoma*, *Aulopoma*, *Cyclophorus*, *Leptopoma*, *Megalomastoma*, *Cataulus*, *Pupinella*, *Pupina*, *Registoma*, *Callia*.

Series secunda. Operculum subcirculare, anfractibus paucis, sensim accrescentibus, nucleo subcentrali.

I. Operculum testaceum. Genera: *Jamaicia*, *Licina*?, *Choanopoma*.

II. Operculum cartilagineum. Genus: *Adamsiella*.

Series tertia. Operculum ovale vel angulatum, anfractibus paucis, magis minusve celeriter accrescentibus, nucleo excentrico.

I. Operculum testaceum. Genera: *Lithidion*, *Otopoma*, *Cyclostomus*, *Tudora*, *Leonia*.

II. Operculum cartilagineum, extus strato tenui testaceo tectum. Genus: *Cistula*.

III. Operculum pure cartilagineum. Genus: *Chondropoma*.

IV. Operculum duplex, intus concameratum. Genus: *Pomatias*.

V. Operculum corneum. Genera: *Realia*, *Omphalotropis*, *Bourciera*.

A. Operculum circulare, saepe extus concavum, anfractibus multis lente accrescentibus formatum, nucleo centrali.

I. Cyclotus Guilding.

Operculum orbiculare, testaceum, arctispirum, extus concaviusculum, margine anfractuum subincrassato vel in laminam incurvatam elevato, nucleo subcentrali. — Testa subturbinato-depressa vel discoidea; peristoma continuum vel marginibus callo junctis, simplex vel duplicatum, rectum vel expansum.

Cyclostoma spec. Auctt.

Species huc pertinentes sequente modo distribui possunt:

I. Peristomate simplice,

a. recto §. 1. Nr. 1—25.

b. expanso §. 2. — 26—34.

II. Peristomate duplicato . . . §. 3. — 35—45.

§. 1.

1. *C. giganteus* Gray.

27

T. late umbilicata, subdepressa, solida, confertim rugoso-striata, sub epidermide corneo-fulva, fasciatim decidua alba;

*) Nearly discoidal; pillar none; spire scarcely raised, and the tip obtuse; a small siphon at the top part of the aperture. Types: *C. planorbulus* Enc. m. 461. f. 3. — *C. variegatus* Sw., Sow. Gen. f. 1. (Swains. l. c.)

spira brevis, acutiuscula, rubescens; anfr. $5\frac{1}{2}$ convexi, celescit accrescentes, ultimus juxta suturam linea impressa notatus, antice subdeflexus, subtus convexior, subtilius striatus; apertura magna, oblique ovalis, intus alba, nitida; perist. rectum, obtusum, marginibus callo albo angulatim junctis, dextro repando. — Operc. normale, anfr. 10—11. — Diam. maj. 50, min. 38, alt. 22 mill. Ap. 25 mill. longa, 22 lata. Operc. diam. 19 mill. (Coll. Nr. 1.)

β. Minor, saturate viridis, linea pallida ad peripheriam et fascia lata nigricanti-viridi infra illam.

*) T. orbiculari-depressa, albida, epidermide aurantiaco-brunnea induta; spira depressa, apice rufescente; anfr. 4 rotundatis, rugulosis, ultimo zonis 2, altera albida, altera fusca, striis incrementi validis; apertura subdepresso-circulari, postice prope ultimum anfractum paulisper angulata; peritremate tenui, antice paululum reflexo; umbilico maximo, anfractibus 4 conspicuis. (Sow l. c.)

**) T. orbiculato-depressa, subcrassa, transversaliter striata, viridescente; fascia nigricante cum albicante linea media; spira prolongata; suturis profundis, anfr. 5; apertura circulari; labro tenui, intus caerulescente. — Lat. 34, alt. 19 mill. — Habitat republica Boliviana. (Orb. l. c.)

***) T. orbiculato-depressa, late umbilicata, transversim tenue striata, sub epidermide olivaceo alba fusco-unizonata; apertura alba subrotunda, vix marginata. — Diam. 30 mill. — Habitat in sylvis Coxearae. (Moric. l. c.)

Habitat in Bolivia, in Brasilia et prope La Guayra.

Obs. Animal teste d'Orbigny glabrum, roseum; pes elongatus, postice acuminatus; tentacula conica, rubra.

32

6. *C. stramineus* Reeve.

T. umbilicata, depressa, subdiscoidea, tenuis, diaphana, straminea, oblique confertissime plicato-striata, striis ab umbilico latiusculo, pervio exorientibus, diagonaliter antrorsum assurgentibus; spira vix elevata, obtuse mucronulata; anfr. $4\frac{1}{2}$ convexi, juxta suturam rugulosi, ultimus subdepressus; apertura subcircularis, superne subangulata; perist. rectum, subincrassatum, marginibus approximatis, callo tenui angulatim junctis. — Operc. ut praeced. — Diam. maj. 25, min. 19, alt. 12 mill. Ap. oblique 12 mill. longa, 11 lata. (Coll. Nr. 4.)

Cyclotus? Duffianus Gray Catal. Cycloph. p. 7. N. 5.

— — Pfr. Consp. N. 22.

Habitat in insula Jamaica.

23. *C. crassus* Adams.

49

T. umbilicata, conoideo-depressa, solida, confertim striata, virenti-fusca vel saturate brunnea; spira breviter conoidea, apice lutescens, acutiuscula; sutura mediocris; anfr. 5 convexi, ultimus obsolete spiraliter striatus, superne leviter corrugatus, basi convexusculus, circa umbilicum mediocrem vix vel non compressus; apertura obliqua, angulato-ovalis, intus livida, nitida; perist. continuum, breviter adnatum, marginibus angulo subacuto junctis, dextro recto, simplice, sinistro incrassato, subreflexo. — Operc. immersum, 7-spirum, lamina spirali elevata, brevissime reflexa. — Diam. maj. 18, min. 15, alt. 10 mill. Ap. 10 mill. longa, 8 lata. (Coll. Nr. 15.)

Cyclostoma crassum Adams Contrib. to Conch. N. 8. p. 143.

— — Chemn. ed. II. Cycl. N. 359. t. 44. f. 14—16.

Cyclotus crassus Pfr. Consp. N. 23.

Habitat Manchester insulae Jamaicae.

24. *C. perpallidus* Adams. †

50

T. umbilicata, subturbinata, subtiliter rugoso-striata, albida, epidermide pallide virenti-fusca induta; spira modice

*) T. suborbiculari, depressa, rugulosa, alba; spira depressa, obtusa, apice prominulo; anfr. 4 rotundatis, postice depressiusculis; sutura distincta, linea obsoleta subsuturali notata; apertura fere circulari; peritremate postice subincrassato, intus prope umbilicum, tenui, ab ultimo anfractu distincto; umbilico magno, antice carinato. (Sow. l. c.)

elevata; sutura bene impressa; anfr. 5, ultimus fere undique minute rugatus, subtus planulatus, peripheriam subangulatam reddens; apertura suborbicularis, effusa, acuminata, superne valde producta; labrum crassum; umbilici diameter $\frac{1}{2}$ aperturæ. — Operc.? — Diverg. media 130° ; alt. 0,45, lat. max. 0,7, min. 0,58". (Ad.)

Cyclostoma perpallidum Adams Contrib. to Conch. N. 9. p. 157. Conf. N. 8, p. 148.

Cyclotus perpallidus Pfr. Consp. N. 24.

Habitat in insula Jamaica.

Obs. Nonne *C. asperulo* nimis affinis?

51

25. *C. Fortunei* Pfr.

T. umbilicata, turbinato-depressa, solidula, subtiliter striatula, fulva, castaneo minute marmorata et infra medium unifasciata; spira brevissime turbinata, vertice subtili; sutura simplex; anfr. $4\frac{1}{2}$ convexi, ultimus teres, non descendens; umbilicus conicus, profundus, $\frac{1}{4}$ diametri subaequans; apertura fere verticalis, subcircularis, superne leviter angulata; perist. simplex, rectum, anfractui penultimo breviter adnatum. — Operculum normale, margine anfractuum filoso-elevato. — Diam. maj. $12\frac{1}{2}$, min. 10, alt. 7 mill. Ap. $6\frac{1}{3}$ mill. longa. (Mus. Cuming.)

Cyclostoma Fortunei (Cyclotus) Pfr. in Proc. Zool. Soc. 1852.

— — Chemn. ed. II. Cycl. N. 404. t. 49. f. 3—5.

Habitat Shanghi Chinae (Fortune).

§. 2.

52

26. *C.? volvuloides* Sowerby.

T. umbilicata, turbinato-depressa, solida, superne et basi confertim spiraliter lirata, nitida, carneo et fusco-violaceo variegata; spira turbinata, obtusiuscula; anfr. 5 perconvexi, ultimus latus, periphæria rotundatus, sublaevigatus; umbilicus latus, profundus; apertura vix obliqua, subcircularis, intus fulvida; perist. simplex, breviter interruptum, album, margine supero repando, expanso, dextro brevi, columellari per dilatato, patente. — Operc.? — Diam. maj. 25, min. 19, alt. 14 mill. (Mus. Cuming.)

3 *Pt. planorbulus* Lamarek.

74

T. latissime umbilicata, depressa, discoidea, solidula, striata et irregulariter malleata, fulva, lineis angulatis rufis conferte strigata et reticulata; spira plana, vertice vix prominulo; sutura profunda, canaliculata; anfr. 5 convexiusculi, ultimus subteres, peripheria nigricante fasciatus, circa umbilicum albus; apertura obliqua, subcircularis, intus coerulescenti-albida; perist. duplex: internum breviter expansum, superne sinu triangulari incisum, externum vix latius, patens, supra sinum alatum dilatatum, liberum. — Operc. subplanum, cartilagineum, arctispirum, anfractuum extimorum margine lamellatim elevato, ciliato. — Diam. maj. 39, min. 31, alt. 12 mill. Ap. 13½ mill. longa. (Mus. Cuming.)

Cornu venatorium Chemn. Conch. Cab. IX. P. II. p. 104. t. 127. f. 1132. 33? **)

Cyclostoma planorbula Lam. in Encycl. méth. t. 461. f. 3.

— — *Lam.* Hist. VI. p. 143. N. 1. Ed. Desh. p. 353. ***)

— — *Desh.* in Enc. méth. II. p. 39. N. 1. †)

*) T. subglobosa, spira depressiuscula; anfr. 5 ventricosus, brunneis, mediane fusco-fasciatis, superne subangulatis, albido-articulatis; sutura marginata; apertura circulari, intus alba, peritremate reflexo, brunneo, superne in canalem decurrente; umbilico magno, margine angulato; operculo spirali, crasso, corneo (Sow. l. c.)

**) Planorbis testa alba, valde depressa, umbilico patentissimo, apertura rotunda in angulo proximo anfractui vicino excisa seu dissecta. (Chemn. l. c.)

***) T. anfractibus teretibus orbiculatim involutis, superne planulata, subtus late umbilicata, bizonata, supra luteo-rufescente, infra castanea; apertura alba; labro margine reflexo. — Diam. 19''' (Lam. l. c.)

†) Grande et belle espèce, assez mal figurée dans les auteurs, pour que nous ne les citions qu'avec doute. La figure de l'Encyclopédie est fort bonne, elle en donne une idée suffisante. Sans être tout à fait planorbique, cette coquille est cependant fort déprimée; l'ombilic, très large, est peu profond, et on y compte tous les tours de spire. Il est entouré, sur le dernier tour, de deux bandes brunes foncées; en dessus, la couleur est uniformément fauve; toute la surface est couverte de stries transverses très fines. Diamètre jusqu'à 19 lignes ou 43 millim. (Desh. l. c.)

Cyclophori spec. Pfr. in Zeitschr. f. Mal. 1847. p. 108.

Cyclostomatis spec. Eydl., Sow., Hutt., Benson.

1. *A. gibbus* Férussac.

207

T. umbilicata, irregulariter conico-inflata, tenuiuscula, longitudinaliter confertim costulato-striata, carneo-cinerascens; spira regulariter elongato-conica, apice aurantiaca vel nigricans, obtusiuscula; sutura profunda, simplex; anfr. 6 convexissimi, ultimus latere gibboso-inflatus, prope aperturam constrictus, antice angustior; umbilicus excentricus, angustissimus, vix pervius; apertura obliqua, subcircularis; perist. duplex: internum breviter porrectum, externum breviter expansum, juxta umbilicum emarginatum. — Operc. albidum, partem contractam anfractus ultimi perfecte claudens. — Diam. maj. 11, min. 8, alt. 8 mill. Ap. intus 4 mill. longa. (Coll. Nr. 80.)

Cyclostoma gibbum Féruss. Mus.

— — Eydoux in Guérin Mag. 1838. t. 117. f. 1. *)

*) Cette petite espèce se distingue parfaitement de ses congénères par sa forme trochiforme, et principalement par son dernier tour, qui semble difforme. Elle est élargie à sa base, pointue au sommet, formée de six tours arrondis, surbaissés et turriculés, couverts de stries longitudinales très fines; ces tours sont séparés par une suture linéaire et enfoncée. Le dernier est beaucoup plus grand que tous les autres, plus large que haut; il est percé à la base d'un petit ombilic étroit et peu profond; l'ouverture est circulaire, presque détachée de l'avant-dernier tour; elle est entourée d'un péristome mince, tranchant, étalé et légèrement renversé en dehors. La coloration extérieure est uniformément d'un grisâtre clair. L'opercule est arrondi, membraneux, non multispiré. (Eydl. p. 6.)

Cyclostoma gibbum Sow. Thes. N. 135. p. 139. t. 30. f. 247. 248. *)

Megalomastoma pauperculum Pfr. Consp. N. 198.

Habitat Bhotan in regione Sikkimensi Himalayae (Benson).

19. *M. Antillarum* Sowerby.

232

T. breviter rimata, turrata, longitudinaliter confertim costulato-striata, epidermide nitidula, corneo-fusca induta; spira elongata, apice obtusiuscula; sutura profunda; anfr. 8 convexi, ultimus penultimo angustior, $\frac{1}{4}$ longitudinis subaequans, basi carina elevata, funiformi munitus; apertura parum obliqua, subcircularis, intus nitida, fulvida; perist. subduplicatum, solum, continuum, superne angulatum, breviter expansum, margine supero sinistro subexciso. — Operc. parum immersum, fusco-lutescens. — Long. 17, diam. $5\frac{1}{2}$ mill. Ap. intus $3\frac{1}{2}$ mill. longa. (Coll. Nr. 95.)

Cyclostoma Antillarum Sow. Thes. N. 168. p. 150. t. 28. f. 180. *)

— — Chemn. ed. II. N. 132. p. 127. t. 15. f. 15. 16.

Megalomastoma brunnea Guild. in Swains. Malac. p. 333. f. 97 g. h. i. (auct.)

— *Antillarum* Pfr. in Zeitschr. f. Mal. 1847. p. 109. Consp. N. 199.

— — Gray Catal. Cycloph. p. 31. N. 5.

Habitat in insulis Tortola (et St. Vincentii.) ?

Obs. Cl. Gray huc refert *Megalomastoma suspensum* Guild. et Swains. (Malac. p. 186. f. 29.), quod autem ex icone valde diversum videtur. Apertura in hac superne minime angulata apparet et lirae spirales testam cingunt. — Cl. Benson e contrario in illa testa, quam nomine *Cyclostomatis Guildingiani* descripsi, *Megalomastoma suspensum* quaerendum esse in litteris suspicatus est.

*) T. turrata, apice obtusiusculo; anfr. 8 rotundatis, longitudinaliter striatis, epidermide cornea instructa; sutura distincta; apertura circulari; peritremate reflexo-patente, albicante, superne submucronato, laterc umbilicali late emarginato; umbilico parvo, margine elevato, crenulato; operculo circulari, spirali, corneo, anfractibus confertis. — Tortola. (Sow. l. c.)

X. Cataulus Pfeiffer.

Operculum orbiculare, planum, corneum, arctispirum. — Testa perforata, pupaeformis, non callosa, basi carina filiformi cincta; apertura integra, basi canali subcirculari prolongata; peristoma continuum, basi in carinam anfractus ultimi dilatatum.

Cataulus Pfr. in Zeitschr. f. Malak. 1851. p. 149. Consp. p. 21.

Cyclostomatis spec. *Auctt.*

Megalomastomatis spec. *Gray.*

233

1. *C. tortuosus* (Turbo) Chemnitz.

T. profunde rimata, fusiformi-oblonga, solidula, subtilissime striata, nitida, albida; spira ovato-turrita, apice acutiuscula; anfr. 7 convexi, 2 penultimi lati, ultimus gracilior, solutus, deorsum protractus, basi carina filiformi, juxta aperturam latiore munitus; apertura verticalis, subcircularis; perist. continuum, album, reflexum, basi distincte canaliculatum, extus angulatum, margine dextro flexuoso. — Operc.? — Long. 18, diam. medio 6 mill. Ap. 5 mill. longa, $4\frac{1}{3}$ lata. (Mus. Cuming.)

Turbo tortuosus Chemn. Conch. XI. p. 158. t. 195. f. 1882. 1883. *)

Helix tortuosa (Cochlodina?) Féruss. Prodr. p. 61. N. 504.

Pupa tortuosa Gray in Ann. of Phil. New ser. IX. p. 413.

Urocoptis? tortuosa Beck Ind. p. 83. N. 10.

Cyclostoma tortuosum Sow. Thes. N. 172. p. 152. t. 28. f. 185. 186. **).

— — Gray Catal. Cycloph. p. 30. N. 1.

Cataulus tortuosus Pfr. Consp. N. 200.

Habitat in insulis Nicobaris (Chemnitz).

234

2. *C. Templemani* Pfr.

T. subperforata, subfusiformi-oblonga, solidula, striata,

*) T. cylindrica, subumbilicata, alba, pellucida, anfractibus 6 rotundatis, rostro seu anfractu infimo insolite protenso, exserto, curvato, basi carinata; apertura orbiculari, annulata. (Chemn. l. c.)

**) T. oblonga, pupiformi, alba, tenui, lucida; anfr. 7 rotundatis, obsolete striatis, ultimo compressiusculo, prope aperturam subcoarctato, exserto; sutura distincta; apertura circulari; peritremate continuo, reflexo, infra interne canaliculato; umbilico parvo, carinato, carina usque ad marginem peritrematis continua. (Sow. l. c.)

parum nitida, castanea; spira oblongo-turrita, apice acutiuscula; anfr. 8 convexiusculi, ultimus basi acute et prominenter carinatus, circa umbilicum angustissimum profunde striatus; apertura circularis, basi subproducta; perist. continuum, aurantiacum, superne breviter adnatum, margine dextro sinistroque reflexo-patentibus, basali deorsum dilatato, canaliculato: canali extus lato, intus lineari. — Operc.? — Long. 20, diam. infra medium $7\frac{1}{2}$ mill. Ap. intus 4 mill. diam., c. perist. 6 mill. longa, $5\frac{1}{3}$ lata. (Mus. Cuming. et Coll. Nr. 96.)

Pupina Templemani Pfr. in Proc. Zool. Soc. 1851.

— — Chemn. ed. II. Cyclost. t. 31. f. 15. 16.

Cataulus Templemani Pfr. Consp. Nr. 201.

Habitat in insula Ceylon (Templeman).

3. *C. Layardi* Gray.

235

T. subperforata, subfusiformi-oblonga, solida, distincte arcuato-striata, pallide straminea; spira oblongo-turrita, apice acutiuscula; anfr. 8 planiusculi, ultimus basi carina elevata, compressa munitus, circa umbilicum angustissimum costulatus; apertura verticalis, subcircularis, basi canali subaperto aucta; perist. continuum, album, superne breviter adnatum, duplex: internum porrectum, externum incrassato-reflexum, basi subangulatim productum, canali extus lato, introrsum angustiore excavatum. — Operc. normale. — Long. $17\frac{1}{2}$, diam. medio 7 mill. Ap. intus $3\frac{1}{2}$ mill. diam., cum perist. 6 mill. longa, 5 lata. (Mus. Brit. et Cuming.)

Megalomastoma Layardii Gray Catal. Cycloph. p. 31. N. 4. (absque descriptione.)

Pupina Templemani β Pfr. in Proc. Zool. Soc. 1851.

— *Layardi* Pfr. in Chemn. ed. II. Cyclost. t. 31. f. 17. 18.

Cataulus Layardi Pfr. Consp. N. 202.

β . T. fuscula, sutura albo-subcrenulata.

Habitat in insula Ceylon (Layard).

4. *C. pyramidatus* Pfr.

236

T. subperforata, ovato-pyramidata, solida, distincte subarcuatim et confertim striata, sericea, saturate castanea; spira turrita, apice acutiuscula; anfr. 7— $7\frac{1}{2}$ modice convexi, ultimus non attenuatus, basi axin vix excedens; carina basalis compressa, antice vix dilatata; periomphalum latiusculum, profundius striatum, medio turgidum; apertura subcircularis; perist.

album, continuum, breviter adnatum, incrassatum, horizontaliter patens et reflexiusculum, basi vix productum, canali mediocri perforatum. — Operc.? — Long. 23, diam. 10 mill. Ap. c. perist. 9 mill. longa, $8\frac{1}{3}$ lata. (Mus. Cuming.)

Cataulus pyramidatus Pfr. in Proc. Zool. Soc. 9 Mart. 1852.

— — Chemn. ed. II. Cycl. t. 48. f. 11.

β. Major, perist. basi subangulatim producto; long. 29, diam. $12\frac{1}{2}$ mill.; ap. c. perist. 11 mill. longa, 10 lata. (Mus. Cuming.)

Cataulus pyramidatus var. Chemn. l. c. f. 9. 10.

Habitat in insula Ceylon.

237

5. *C. eurytrema* Pfr.

T. subperforata, subfusiformi-oblonga, solida, subarcuato-striata, vix nitidula, castanea; spira turrita, apice obtusiuscula; anfr. $8\frac{1}{2}$ convexi, ultimus angustior, basi oblique supra axin protractus; carina basalis valida, compressa, antice sensim tubae instar dilatata; apertura circularis; perist. carneum, continuum, breviter adnatum, incrassatum et reflexum, parte sinistra marginis basalis canali magno subcirculari, retrorsum in rimam filiformem abeunte, perforato. — Long. 26, diam. 10 mill. Ap. c. perist. oblique $8\frac{1}{2}$ mill. longa, $7\frac{1}{2}$ lata. (Mus. Cuming.)

Cataulus eurytrema Pfr. in Proc. Zool. Soc. 9 Mart. 1852.

— — Chemn. ed. II. Cycl. t. 48. f. 12. 13.

Habitat in insula Ceylon.

238

6. *C. Thwaitesi* Pfr.

T. vix perforata, subfusiformi-turrita, solida, longitudinaliter confertim costulata, vix nitidula, violaceo-fusca; spira ovato-turrita, apice acutiuscula; sutura impressa; anfr. 7– $7\frac{1}{2}$ convexiusculi, ultimus vix attenuatus; carina basalis validissima, compressa, *angulatim patens*, alba; apertura verticalis, circularis; perist. duplex, album: internum basi profunde incisum, externum ad anfr. penultimum excisum, caeterum incrassatum, reflexum, basi canali mediocri perforatum. — Operc.? — Long. 19, diam. 7 mill. Ap. c. perist. 6 mill. longa et lata. (Mus. Cuming.)

Cataulus Thwaitesi Pfr. in Proc. Zool. Soc. 9 Mart. 1852.

— — Chemn. ed. II. N. 6. t. 49. f. 9. 10.

Habitat in insula Ceylon (Thwaites).

XI. Pupinella Gray.

Operculum corneum, arctispirum. — Testa ovata, epidermide tenui, cornea induta; apertura circularis; peristoma reflexum, latere sinistro prope basin canaliculatum.

Pupinella Gray Catal. Cycloph. Brit. Mus. p. 33.

γ. Peristomate latius expanso, concentrice striato, rufo, margine sinistro subundulato.

Cyclostoma serriferum Adams Contrib. to Conch. N. 1. p. 4. ***) (Spec. authent.)

Habitat in insula Jamaica.

*) T. ventricosus-subpyramidalis, fusca, apice decollato; anfr. 4 ventricosis, decussatis, subasperis; sutura crenulatuscula; apertura circulari; peristomate crasso, reflexo-subpatente, albicante; umbilico minori; operculo lamina spirali reflexa. (Sow. l. c.)

**) This may be a variety of *C. variabile*; it is chiefly distinguished by having the lamellae between the inner and outer peritremes so much produced as to appear like numerous concentric margins; by having the lip reflected farther back; by a more slender general form, the mean divergence being 33° to 35° . The lip is reddish purple, with darker rays of the same conspicuous in the more simple lip of the young, and the square sutural spots are always faint. (Adams l. c.)

***). Shell ovate-conic, moderately elongate; reddish brown with a series of rather dark spots of the same; with very thin and sharp transverse perpendicular rather distant lamellae, which are serrated by a few faintly impressed spiral lines: spire with convex outlines; apex truncate with the loss of about three whorls; remaining whorls four and one half, moderately convex, with a well impressed suture; last whorl scarcely detached from the penultimate whorl near the aperture, which is orbicular; inner peritreme not produced (?); outer peritreme shining, well expanded, except opposite to the penultimate whorl; umbilicus narrow, but extending through the truncate apex. Mean divergence about 40° ; length 0.57, greatest breadth 0.35, least breadth 0.275 inch. — This may possibly be an accidental variety of *C. Grayanum* or of some other of this group. The only specimen which I have does not appear to have the lip fully developed with age. (Adams l. c.)

*) Cette espèce est conique, trochiforme, formée de 5 tours convexes, arrondis, garnis, principalement le dernier, de petites carènes ou côtes transverses, régulières, entre lesquelles on en aperçoit d'autres beaucoup plus fines et très-rapprochées. Examinée à la loupe, cette coquille présente aussi un très-grand nombre de stries longitudinales très-fines et très-serrées. Sous le dernier tour on voit un ombilic médiocre et profond; la suture est simple et linéaire; l'ouverture, assez ample, est arrondie, oblique à l'axe, à bords minces, le plus souvent marginés en dehors. La coloration extérieure est un fond d'un jaune paille terne, parsemé de larges maculations longitudinales brunes et ondulées, souvent interrompues dans leur trajet, ce qui donne à sa surface l'aspect de nattes très-fines. — Diam. 7^{mm}. (Eyd. l. c.)

**) *T. tenui*, subglobosa, pallida, fusco-variegata, spira conoidea, subacuminata, apice acutiusculo; anfr. 4—5 ventricosis, spiraliter sulcatis et carinatis; apertura circulari sub-effusa, peritremate tenui, subreflexo, margine leviter sinuato, umbilico mediocri, spiraliter sulcato; operculi anfractibus oblique striatis. (Sow. l. c.)

***) The last whorl has 10 elevated horizontal ribs or ridges, equidistant from each other, and crossed longitudinally by numerous fine striae — margin is reflected and partly covers the umbilicus — lip white, shell reddish; with the exception of the fimbriated edge to the margin it resembles *Cycl. pulchrum* Sow. gen. fig. 2. Habitat in insula Zanzibar (Guillain).

*) Cette jolie espèce de Cyclostome a des rapports avec le *C. ligata* Lam.: on le prendrait pour une variété; mais, certains caractères particuliers l'en distinguent nettement: par exemple, il est constamment beaucoup moins grand, beaucoup plus mince, plus fragile et n'est nullement sillonné en travers, mais recouvert d'une grande multitude de fascies brunes, transverses. Il a également de l'analogie avec le *C. multilabre* Quoy & Gaim.; il en diffère cependant: son ouverture est plus arrondie; les linéoles de la surface moins marquées; il est ombiliqué, tandis que le *C. multilabre* ne l'est pas; 5 à 6 tours de spire arrondis, à sommet obtus. (Grat. l. c.)

**) T. ventricoso-conica, umbilicata, albida vel lutescente; anfr. 4—5, convexi, ultimo ventricosus, lineis fuscis spiraliter picto, mediana majori; apertura orbiculari superne subangulata; labro vix reflexo, umbilico medio-crici, spiraliter sulcato. (Petit l. c.)

T. subperforata, cylindræo-turrita, decollata, tenuis, costis longitudinalibus confertis rugulosa, diaphana, cinerascienti-albida; anfr. superst. 4 convexi, lente accrescentes, ad suturam canaliculatam denticulati, ultimus subdisjunctus, pone aperturam callo lato, antice dentiformi cum penultimo junctus, basi obsolete spiraliter sulcatus; apertura verticalis, oblique

*) T. *C. Bronnii* affini, fasciis angustis fuscis interruptis ornata, sutura haud multum crenulata, labro minore. Forsan var.? Alt. 0,55, lat. max. 0,4, lat. min. 0,3 poll. (Adams l. c.)

**) Shell ovate conic, rather short: with several inequidistant unequal more or less interrupted spiral lines of brown, of which four or five appear on the penult whorl: with rather closely set sharp elevated transverse lamellæ, which are more prominent at the sutures, without spiral striae except a few ridges in the umbilicus: apex truncate with the loss of two or three whorls: spire with the outlines quite convex: about three and one-half whorls remaining, very convex, with a rather deep suture: aperture orbicular, with two peritremes, of which the outer one is narrow, auriculate above, reflected nearly into the plane of the aperture; the inner peritreme is rather stout, well produced, a little reflected. The operculum has a spiral lamella, which has about four and one-half whorls, and is but little elevated and much produced laterally. Mean divergence about 50° . — This shell much resembles *C. tectilabre*, but the outer peritreme is more expanded, and the margin of the operculum is not reflected backwards.

ovalis; perist. duplicatum: internum rectum, externum undique subaequaliter patens. — Operc. terminale, testaceum, nucleoparum excentrico, anfr. 4 oblique confertim sulcatis, margine subelevato. — Long. 10—11, diam. $4\frac{1}{2}$ —5 mill. Ap. 3— $3\frac{1}{2}$ mill. longa, $2\frac{1}{2}$ — $2\frac{3}{4}$ lata. (Coll. Nr. 165.)

Obs. Species praecedenti tam affinis, ut characteribus essentialibus vix distingui possit. An ejus varietas?

*) Shell much elongated, conic; shining, whitish or brownish, with six spiral series in three pairs of narrow dark brown spots which are either oblong or sagittate, the middle pair being more or less confluent, — with also a broad band and some more or less distinct lines of dark brown around the umbilical region; with transverse striae very strong on the upper whorls, and feeble and distant on the last whorl, decussated by faint spiral striae; spire with the outlines scarcely convex; apex truncate with the loss of two or three whorls; five whorls remaining, with a moderately impressed suture, which is subcrenulate by the enlargement of the upper ends of the transverse lines in twos and threes; aperture ovate-orbicular, oblique; inner peritreme a little produced and reflected; outer peritreme well expanded, white, in some yellowish, more or less concave, much produced above and inflected forming a deep pit, before the umbilicus reflected far back into a deep sinus, with an alate expansion next to the sinus; umbilicus very small. Mean divergence 38° ; length 0,9; greatest breadth 0,52; least breadth 0,4 inch. (Adams l. c.)

**) Shell moderately elongated, conic; shining, brownish white with white spots, and spiral interrupted bands of pale brown, deep orange near the aperture; very finely decussate with nearly equal slightly elevated lines, but on the upper whorls the transverse lines are more prominent and the spiral lines obsolete; spire with the outlines slightly convex; apex truncate, with the loss of two or three whorls; four whorls remaining, with a well impressed suture; aperture large ovate-orbicular, moderately angulated above; inner peritreme scarcely distinct, reflected upon the outer peritreme, which is reflected nearly into the plane of the aperture, is moderately spreading, sharp, thickened, narrower and bent back opposite the umbilicus, which is small. Mean divergence 40° ; length 0,56; greatest breadth 0,36; least breadth 0,26 inch. (Adams l. c.)

19. **T.? crenulosa Adams.**

417

T. perforata, elongato-conica, solida, truncata, longitudinaliter confertim costato-striata, coerulescenti-albida, fusculonebulosa et lineis rufis in ziczac flexis elegantissime picta; sutura parum impressa, confertim denticulata; anfr. superst. 5 parum convexi, ultimus basi fuscus; apertura verticalis, ovalis, superne subangulosa, intus livida; perist. duplex: internum expansum, appressum, rubrum, externum album, dilatato-expansum, superne et infra columellam angulatim productum. — Operc.? — Long. 21, diam. $9\frac{1}{2}$ mill. Ap. $6\frac{1}{2}$ mill. longa. (Mus. Cuming.)

Tudora avena Pfr. Consp. N. 378.

Habitat in insula Jamaica.

*) *T.* oblongo-conoidea, umbilicata, truncata, regulariter costulato-pli-
cata, fusco-violascens vel pallide fulva; lineolis saepissime rubellis sub-
interruptis fasciata; spira turrita; anfr. $4\frac{1}{2}$ —5 convexi, ultimo ad umbilicum
planulato, subporrecto, disjuncto, sursum carinato. Sutura valde crenulata;
apertura ovalis. Perist. duplex: internum lineare; externum subdilatum,
liberum, margine supero angulato, reflexiusculo, subcanaliculato, carinae
affixo. — Long. 15, diam. 7 mill. (Morelet 1 c.)

**) Shell small, elongate; whitish, more or less tinged with brown,
with numerous small distant brown dots in spiral series on the lower whorls,
on the upper whorls blueish gray; with closely set transverse moderately
elevated lines, some of which, in twos or rarely in threes, are more devel-
oped at the sutures into small white crenulations; spire with moderately
convex outlines; apex truncate with the loss of two or three whorls; about
four and one-half whorls remaining, very convex, with a deep suture; last
whorl much detached from the penult whorl near the aperture; aperture
suborbicular, contracted a little on the left side; inner peritreme a little
produced; outer peritreme rather small, much less extended on the left than
on the right side, not reflected quite back to the plane of the aperture, pro-
duced above into a concave angle; umbilicus very small. Mean divergence
 23° ; length 0,32; greatest breadth 0,14; least breadth 0,11 inch. (Adams 1. c.)

XXIII. *Leonia* Gray.

Operculum ovale, testaceum, extus perconvexum, unispiratum, nucleo juxta marginem columellarem posito. Testa ovato-conica; apertura ovalis; peristoma, simplex, subreflexum.

Leonia Gray Syn. Brit. Mus. 1840. Ed. 1842. p. 91; Proc. Zool. Soc. 1847. p. 181. n. 517; et Catal. Cycloph. p. 34.

502½

T. globoso-ovata, laevis, nitidiuscula, pellucida, flavo-rufescens; spira elata; anfr. $3\frac{1}{2}$ —4 convexi; sutura profunda; apertura semicircularis; perist. simplex, acutum, rectum, margine columellari callo nitidissimo effuso ornato. — Alt. et lat. vix ultra $2\frac{1}{2}$ mill. (Sh.)

*) Shell ovate, pale brown, covered with a dull brown periostraca marked with elevated, transverse, membranaceous ridges rather fringed on the edge; apex rounded; whorls convex, rounded in front, and with a deep brown band round the axis; axis scarcely perforated; mouth ovate; peristome reflexed, sharp-edged, with a thin, sharp-edged, slightly-raised internal peristome. — Length $2\frac{1}{2}$ lines. (Gray l. c.)

Hydrocaera Gutta Shuttlew. Diagn. neuer Moll. N. 1. p. 11.

Habitat consortio *Helicis Clymenae*, *Pupae castaneae*, etc. sub saxis udis in Teneriffa; var. minor occurrit in insula Palma.

Obs. „*Cycl. minutissimo* Sow. et *Cattaroensi* Pfr. affine, nec *Cyclostomati*, nec *Omphalotropae* Pfr. adscribendum.“

XXVIII. *Omphalotropis* Pfr.

Operculum tenue, corneum, paucispinum. Testa perforata vel anguste umbilicata, turrita vel globoso-turbinata, circa perforationem carinata; apertura ovalis; peristoma disjunctum, rectum vel expansum.

Omphalotropis pupoides Pfr. in Proc. Z. S. 1851; Consp. N. 452.

Habitat in insula Opara.

3. *O. terebralis* Gould. †

505

T. parva, turrita, acuminata, flava vel dilute cornea, laevigata, umbilico rimato circumvallato perforata; spira elevata, acuta; anfr. 6—8 convexiusculi, antice subangulati, sese partim obtegentes; sutura impressa; apertura subrotunda, postice angularis, campanulata; perist. simplex, anfractui penultimo longe adnatum. — Lat. $\frac{1}{10}$, alt. $\frac{1}{4}$ poll. (G.)

Cyclostoma terebrale Gould in Proc. Bost. Soc. 1847. p. 206 **) et Exped. shells p. 39. Ed. 1851. p. 106. f. 120.

— — *Petit* in Journ. Conch. 1850. I. p. 47.

Omphalotropis terebralis Pfr. in Proc. Zool. Soc. 1851; Consp. N. 453.

Habitat in insulis Taheiti et Eimeo.

* * *

*) T. elongato-conoidea, spira perlonga; anfr. $6\frac{1}{2}$ —7 plani, sutura acuta separati, ultimus $\frac{1}{4}$ longitudinis formans, penultimo paulo angustior; nitida, fuscula, perforata; apertura subrotunda, anfractu ultimo vix modificata; perist. acutum. — Lat. $1\frac{1}{4}$ ''' . Alt. $2\frac{1}{2}$ ''' . (Anton l. c.)

**) Distinguished from allied species by its acuminate spire, angular, imbricated whorls and expanded aperture. It bears a general resemblance to *Pupa fallax* Say. (Gould l. c.)

506

4. **O. rosea Gould.**

T. vix perforata, ovato-subturrita, solida, laevigata, rosea; spira elongato-conica, sursum lutea, apice obtusa; anfr. 6 planiusculi, ultimus spira brevior, basi rotundatus, juxta perforationem carina filiformi munitus; apertura obliqua, ovalis; perist. subincrassatum, rectum, marginibus conniventibus, callo junctis. — Operc.? — Long. 8, diam. $4\frac{1}{2}$ mill. Ap. 3 mill. longa, 2 lata. (Mus. Cuming.)

Cyclostoma roseum Gould in Proc. Bost. Soc. 1847. p. 205. *) Exped. shells p. 39. Ed. 1851. p. 105. f. 121.

— — *Petit Journ. Conch.* 1850. I. p. 47.

Omphalotropis rosea Pfr. in Proc. Z. S. 1851; Consp. N. 454.

Habitat in insulis Feejee.

507

5. **O. vallata Gould. †**

T. parva, solida, elongato-conica, lucida, fusco-cornea; spirae anfr. 6 convexi, subangulati, ultimus costa valida umbilicum ambiente munitus; sutura profunda; apertura oblique ovata; perist. simplex, continuum, campanulatum. — Lat. $\frac{1}{8}$, alt. $\frac{1}{5}$ poll. (G.)

Cyclostoma vallatum Gould in Proc. Bost. Soc. 1847. p. 206. Exped. shells p. 39. Ed. 1851. p. 107. f. 122.

— — *Petit Journ. Conch.* 1850. I. p. 47.

Omphalotropis vallata Pfr. in Proc. Zool. Soc. 1851; Consp. N. 455.

Habitat in insula Tonga Tabou.

508

6. **O. ? scitula Gould. †**

T. parva, elongato-conica, tenuis, rufo-cornea, striis incrementi tenuibus solum insculpta, arcte umbilicata; spira elevata, anfr. 6—7 rotundatis, supernis subangulatis; sutura profunda; apertura rotundato-ovata, parva, trientem longitudinis adaequans; perist. simplex, pallidum. — Long. $\frac{1}{5}$, lat. $\frac{1}{10}$ poll. (G.)

Cyclostoma scitulum Gould in Proc. Bost. Soc. 1847. p. 206. **) Exped. shells p. 39. Ed. 1851. p. 108. f. 123.

*) T. parva, solida, elevato-conica, glabra, pallide rosea; spira acuta; anfr. 6 convexiusculis, supra arcte tabulatis; sutura bene impressa; apertura spiram haud aequans, ovata; perist. eversum, acutum; fissura umbilicalis costa circum-ambiente finita. — Lat. $\frac{1}{5}$, alt. $\frac{1}{20}$ poll. (Gould l. c.)

**) Almost exactly like *Ammicola Sayana* Anth. It is larger and more ventricose than *C. vallatum* and is distinguished from *C. terebrale* by its less slender form and unexpanded lip. (Gould l. c.)

Cyclostoma scitulum Petit Journ. Conch. 1850. I. p. 47.

Omphalotropis? scitula Pfr. in Proc. Zool. Soc. 1851; Consp. N. 456.

Habitat in insulis Taheiti, Eimeo, Manua.

§. 2.

7. **O. aurantiaca** Deshayes.

509

T. perforata, ovato-conica, solidula, concentrice minutim et confertim striata, rubra; spira conica, acuta; anfr. 6—7 vix convexiusculi, ultimus longitudinaliter striatus, medio linea elevata subcarinatus, basi juxta perforationem linea altera elevata munitus; apertura obliqua, ovalis, intus concolor; perist. subincrassatum, album, expansiusculum, marginibus disjunctis, columellari simplice, superne dilatato. — Operc. normale. — Long. $9\frac{1}{2}$, diam. $5\frac{1}{2}$ mill. Ap. $4\frac{2}{3}$ mill. longa, $3\frac{1}{2}$ lata. (Coll. Nr. 231.)

Habitat in insula Guam Mariannarum.

512

10. *O. dubia* Pfr.

T. perforata, ovato-conica, sublaevigata, tenuiuscula, rubello-cornea; spira conica, acutiuscula; anfr. 6 convexiusculi, ultimus spira vix brevior, juxta perforationem subangulatus; apertura subverticalis, ovalis, basi subeffusa; perist. simplex, acutum, marginibus disjunctis, dextro recto, columellari brevissime reflexiusculo. — Operc. normale. — Long. 9, diam. 5 mill. Ap. 4½ mill. longa, 3 lata. (Coll. Nr. 233.)

Cyclostoma dubium Pfr. in Zeitschr. f. Mal. 1846. p. 86.

— — Chemn. ed. II. N. 203. p. 182. t. 30. f. 4—6.

lutea rubro variegata; anfr. 6; apertura subrotunda, alba; perist. albo, non continuo; umbilico angusto, canali crista parvmarginato formato. — Long. 4, diam. 2½^{mm}. (Quoy et G. l. c.)

*) T. ovato-conica, perforata, ad peripheriam carinata, apice acuta, oblique striata, lutea, rubro variegata; apertura subrotunda, alba; anfractibus senis. (Desh. l. c.)

**) T. ovato-conica, perforata, apice acuta, spira luteola; ultimo anfractu semper eroso, violaceo vel rubro; apertura rubescens, peristomate simplici, integro, subovali, umbilico canaliculato. — Long. 10, lat. 5 mill. (Desh. l. c.)

Hydrocena? dubia Pfr. in Zeitschr. f. Mal. 1847. p. 112.

Realia dubia Gray Catal. Cycloph. p. 63. N. 6.

Omphalotropis dubia Pfr. in Proc. Zool. Soc. 1851; Consp. N. 460.

Habitat in insula Opara (H. Cuming.)

11. **O. multilirata Pfr.**

513

T. perforata, ovato-conica, solidula, liris elevatis acutiusculis subconfertis, mediana et basali validioribus sculpta, opaca, rubello-carnea; spira conica, acutiuscula; anfr. $5\frac{1}{2}$, superi subplani, ultimus convexior; apertura parum obliqua, angulato-ovalis; perist. simplex, rectum, marginibus approximatis, columellari superne emarginato, deorsum dilatato, reflexiusculo. — Operc.? — Long. $8\frac{1}{2}$, diam. 5 mill. Ap. 4 mill. longa, 3 lata. (Mus. Cuming.)

Cyclostoma multiliratum (Omphalotropis) Pfr. in Proc. Zool. Soc. 1851.

Omphalotropis multilirata Pfr. Consp. N. 461. p. 70.

Habitat in insula Mauritii (Sir David Barclay).

12. **O. globosa Benson.**

514

T. umbilicata, globoso-conica, tenuis, subtilissime striatula, diaphana, non nitens, cinnamomea, maculis opacis albidis subfasciatim dispositis ornata; spira conica, apice peracuta; anfr. 6, superi vix convexi, ultimus globosus, carina basali subtili, filari; apertura parum obliqua, ovalis; perist. simplex, marginibus fere contiguis, dextro perarcuato, columellari medio dilatato, patente. — Operc. tenuissimum, corneo-lutescens, extus concaviusculum. — Long. 8, diam. 5 mill. Ap. 4 mill. longa, $3\frac{1}{3}$ lata. (Coll. Nr. 234.)

Cyclostoma globosum Bens. mss. teste Barclay.

— — Chemn. ed. II. N. 295. t. 39. f. 14—16.

Omphalotropis globosa Pfr. in Proc. Z. S. 1851; Consp. N. 462. p. 71.

Habitat in arboribus sylvarum insulae Mauritii (Sir D. Barclay).

13. **O. plicosa Pfr.**

515

T. perforata, ovato-conica, tenuis, longitudinaliter confer-tim plicata, sericea, rubello-cornea; spira conica, acuta; anfr. 5 convexiusculi, ad suturam crenulati, ultimus spiram subaequans, rotundatus, circa perforationem angustam compresse subcarinatus; apertura vix obliqua, ovalis; perist. simplex, rectum, marginibus approximatis, columellari reflexiusculo. —

Operc. pallidum, extus concaviusculum. — Long. 6, diam. 4 mill. Ap. 3 mill. longa, $2\frac{1}{3}$ lata. (Coll. Nr. 235.)

Cyclostoma plicosum (Omphalotropis) Pfr. in Proc. Zool. Soc. 9 Dec. 1851.

— — Chemn. ed. II. N. 383. t. 46. f. 41. 42.

Omphalotropis plicosa Pfr. Consp. N. 463. p. 71.

Habitat . . . ?

516

14. *O. expansilabris* Pfr.

T. vix perforata, ovato-conica, tenuis, sublaevigata, parum nitida, pallide lutea, corneo minutissime variegata et fascia 1 rufa infra medium (rarius 2) cincta; spira elevato-conica, apice acutiuscula; anfr. 6 vix convexi, ultimus medio et basi filo-carinatus; apertura obliqua, ovalis; perist. undique subaequaliter breviterque expansum, album, marginibus subdistantibus. — Operc.? — Long. $5\frac{1}{2}$, diam. 3 mill. Ap. 2 mill. longa, $1\frac{1}{2}$ lata. (Coll. Nr. 236.)

Cyclostoma expansilabre (Omphalotropis) Pfr. in Proc. Zool. Soc. 1851. ² p. 13.

— — Chemn. ed. II. N. 296. t. 39. f. 17—19.

Omphalotropis expansilabris Pfr. Consp. N. 464. p. 71.

Habitat in fruticibus in interiore insulae Mauriti (Sir D. Barclay).

XXIX. Bourciera Pfr.

Operculum ovale, solidiusculum, corneum, anfractibus paucis rapide accrescentibus. Testa helicinaeformis; columella basi dentata; apertura ovalis; peristoma expansum.

Bourciera Pfr. in Zeitschr. f. Malak. 1851. p. 178; Consp. p. 49.

Cyclostoma (spec.) Pfr. olim.

Species unica:

517

1. *B. helicinaeformis* Pfr.

T. obtecte umbilicata, conoideo-globosa, solidula, striatula, parum nitens, virenti-cornea; spira parvula, conoidea, acutiuscula; anfr. 6 convexiusculi, ultimus inflatus, antice subascendens, pone columellam profunde excavatus, callosus; apertura subverticalis, angulato-ovalis; columella subverticalis, retrorsum in dentem acutum desinens; perist. incrassatum, album, undi-

que late expansum, reflexiusculum. — Operc. typicum. — Diam. maj. $17\frac{1}{2}$, min. 13, alt. 11 mill. (Mus. Cuming.)

Cyclostoma heliciniforme Pfr. in Proc. Zool. Soc. 1851. 2

— — Chemn. ed. II. N. 224. t. 32. f. 8—10.

Bourciera helicinaeformis Pfr. Consp. N. 465. p. 71.

Habitat in valle Yaraqui reipublicae Aequatoris (Bourcier).

Cyclostomacea sedis omnino incertae, vel dubia.

1. *Cyclostoma cuspidatum* Benson.

518

T. umbilicata, acuminato-conoidea, oblique striata, lineis spiralibus circumdata, epidermide olivaceo-fusca; spira elongata, attenuata, apice mammillari; anfr. 5, primi convexi, ultimus et penultimus superne convexiusculi, lira unica praediti, ultimus subtus convexus, peripheria carinata, carina lamellato-fimbriata, basi 3-lirata, lira subumbilicari fimbriata; apertura perobliqua, subcircularis, superne subangulata, dimidium longitudinis aequans; perist. tenue, acutum, margine columellari expansiusculo; umbilicus mediocris, profundus, anfractus plures exhibens. — Operc.? — Diam. maj. 6, min. 5, alt. 4 mill. (B.)

Cyclostoma cuspidatum Bens. in Ann. and Mag. VIII. 1851. p. 189.

— — Chemn. ed. II. Cycl. N. 407. t. 49. f. 21—23.

Habitat ad apices montium Nilgherries (Jerdon).

2. *Cyclostoma marginatum* Chemnitz.

519

T. alba, subovato-rugosa, perforata, anfractibus transversis marginatis et striatis. (Chemn.)

Turbo marginatus Chemn. Conch. IX. P. 2. p. 60. t. 123. f. 1075 $\alpha \beta$. *)

— *limbatus* Gmel. Syst. p. 3606. N. 105. **)

Cyclostoma murrhinum Menke Synops. ed. II. p. 39. (ex citat.)

Habitat Coromandel.

O b s. An potius *Bithiniae* species?

*) Testa striis subtilibus et longitudinalibus scabra et rugulosa, striis crebris acutis transversis quasi costata; umbilicus parvus; apertura circularis; operculum testaceum, album, orbiculare, striis concentricis notatum. (Chemn. l. c.)

**) Testa subovata rugosa perforata alba. (Gmel. l. c.)

520

3. *Cyclostoma patera* Pfr.

T. latissime umbilicata, solidula, discoidea, liris latis granulatis, interpositis linearibus sculpta, epidermide olivaceo-fusca obducta; spira plana; sutura subcanaliculata; anfr. $4\frac{1}{2}$ planulati, ultimus medio carinis 2 filiformibus (interposito sulco) munitus, basi convexus, circa umbilicum pateraciformem subangulatus; apertura verticalis, subangulato-rotundata; perist. simplex, rectum, marginibus approximatis. — Operc.? — Diam. maj. 10, min. 8, alt. $2\frac{1}{2}$ mill. (Mus. Cuming.)

Cyclostoma patera Pfr. in Proc. Zool. Soc. 9 Dec. 1851.

— — Chemn. ed. II. N. 350. t. 43. f. 23—25.

— — Pfr. Consp. N. 468. p. 72.

Habitat . . . ?

O b s. *Solarii* quasi faciem offert; an revera Cyclostomaceis adnumerandum?

521

4. *Cyclostoma sarritum* Benson. †

T. subimperfectorata, ovato-conica, lineis spiralibus crebris, sulcis angustis divisis, munita, ferrugineo-albida, apice rubens, sutura bene impressa, apice obtuso; anfr. 4 valde convexi; apertura vix obliqua, ovata, $\frac{3}{8}$ longitudinis aequans, perist. acuto, expansiusculo, marginibus disjunctis, columellari superne angulato, pariete calloso. — Long. 2, diam. $1\frac{1}{4}$ mill. (B.)

Cyclostoma sarritum Bens. in Ann. and Mag. 1851. VIII. p. 188.

Habitat in muscis arborum vallis profundae prope Cherra Poonjee, in montibus Garo dictis, praeter fines Orientales provinciae Bengaliae (Benson).

522

5. *Cyclostoma? crenatum* Linn. †

T. subcancellata, turrata, anfractibus contiguis, supra crenatis. (Linn.)

Habitat in Europa australi.

O b s. Haec species a nonnullis ad *Cyclostoma elegans* refertur.

8. *Cyclostoma lunulatum* Müller. †

525

T. cylindracea alba reticulata; apertura remota. — Long. 7, lat. $4\frac{1}{2}$ lin. — Testa dura, pellucida, eleganter striata, seu reticulata, uti *Nerita elegans*, striae vero minus convexae. Anfractus 5, fasciis 4 vel 5 lunularum rufescentium, vel si mavis lineis transversim serpentibus notati, maximus minus ventricosus, quam in congeneribus. Juncturae spirarum punctis elevatis sive papillis parvis distinctae; hae partem anfrac-

*) Testa turrita, alba, margine superiore anfractuum crenato, noduloso; apertura rotunda, annulo cincta, basi carinata. — Operculum tenue, pellucidum, mellei coloris. — Ex insulis Antillis (Chemn. l. c.)

**) Testa conico-oblonga, pellucida, testacea s. cornea. Anfractus teretes, decussatim vix manifeste striati, parte $\frac{1}{3}$ contigui. Apertura margine reflexo, intus laevis. Umbilicus spiralis, hians usque ad apicem. (Linn. l. c.)

tus, qua vicino adjacet, quasi crenulatam reddit. Apertura circinnata ultra anfractum vicinum porrecta. Foramen uti in *N. Licinia*. Lunulae rufae evanescent. — In Museo Fabriciano. (Müll.)

Nerita lunulata Müll. Hist. verm. II. p. 180. n. 366.

Turbo lunulatus Gmel. Syst. p. 3605. n. 72.

Habitat . . . ?

O b s. Cl. Mörch hanc speciem cum *C. Auberiano* Orb. (*dentato* Say) identicam putat; descriptio Mülleriana ad plures quidem species satis congrua est, optime autem ad *C. decussatum* Lam. (N. 262) referenda videtur.

Cyclostomacea ex icone modo mihi nota.

- Cyclostoma agglutinans* Hombr. & Jacq. Voy. Pol Sud. Moll. t. 12. f. 7—10. (Oceania.)
- *albida* H. & J. ibid. t. 12. f. 25—28. (Samoa.)
- *bulimoides* H. & J. ibid. t. 12. f. 37—39. (Hogoleu.)
- *exigua* Hombr. & Jacq. ibid. t. 12. f. 1—3. (Mangareva.)
- *Garreli* Souleyet in Voy. Bonite. Moll. t. 30. f. 33—37.

— Pfr. in Chemn. ed. sec. I. 18. p. 1.

Oligyridae Gray 1847. Proc. Zool. Soc. p. 182.

Plurimi scriptores Lamarckium sequentes unicum genus *Helicinam* in hac familia admiserunt, donec Cl. Swainson (Malac. p. 336) genera nonnulla ab illo separare conatus fuerit. — Cl. Gray tandem 1842 genera tria: *Helicinam* (s. 1847 *Oligyram*), *Lucidellam* et *Alcadiam* adoptavit; praeter ea *Trochatella Swains.*, definitioni Lamarckianae haud congrua, et *Stoastoma Adams* in familia Helicinaceorum admittenda videntur.

I. *Stoastoma* Adams.

Operculum non spiratum, calcareum, exiliter et irregulariter lamelliferum, extus profunde concavum. Testa globoso-conica, depressa vel discoidea; apertura semiovalis vel subsemicircularis, superne et basi angulata; perist. continuum, margine dextro rotundato, sinistro stricto, basi carinulam spiralem retromittente.

15. *St. Tappanianum* Adams. †

540

T. subdiscoidea, carinis 7 (suprema & infima minutis) et lineis spiralibus subtilissimis sculpta, pallide cornea, subdiaphana; spira modice et convexe elevata; anfr. $3\frac{1}{2}$ modice

*) T. discoidea, pallide virente, carinis paucis, et lineis elevatis exilissimis, spiralibus, ornata; spira convexa paululum elevata; anfr. $3\frac{1}{2}$, ultimo lato, sutura valde impressa; apertura campanulata; labro longe producto, supra auriculato, a carinis productis pectinato; umbilico sublato, lamella spirali haud multum elevata. — Diverg. 155° ; long. 1,27; lat. max. 2,79; lat. min. 2,04 mill. (Adams l. c.)

convexi, ultimus vix solutus; apertura semicirculo paulo major, pone labrum subcontracta; labrum superne abrupte productum, carinis vix crenulatum; labium valde solutum, subreflexum; umbilicus latiusculus, lamella spirali mediocri. — Operc. profunde concavum, laevigatum, utrinque auriculatum. — Diverg. 140° ; long. 0,045; lat. max. 0,086; lat. min. 0,07 poll. (Ad.)

Stoastoma Tuppanianum Adams in Ann. Lyc. N.-York. V. N. 2. p. 65.

— — — Adams Contrib. to Conch. N. 8. p. 149. *)

Habitat in insula Jamaica.

541

16. *St. Vilkinsoniae* Adams. †

T. subdiscoidea, carinis 5 et lineis spiralibus subtilissimis (4—6 in quovis interstitio) sculpta, pallide cornea, subdiaphana; spira modice et convexe elevata; anfr. $3\frac{1}{2}$ angulati, ultimus latiusculus, antice solutus; apertura campanulata; labrum longe productum, auriculatum, carinis profunde crenatum; labium valde solutum, subreflexum; umbilicus latiusculus, lamella spirali mediocri. — Operc. utrinque auriculatum, subtilissime punctulatum. — Diverg. 140° ; long. 0,035; lat. max. 0,07; lat. min. 0,055 poll. (Ad.)

Stoastoma Vilkinsoniae Adams in Ann. Lyc. N.-York V. N. 2. p. 64.

— — — Adams Contrib. to Conchol. N. 8. p. 148. **)

Habitat in insula Jamaica.

542

17. *St. Hollandianum* Adams. †

T. subdiscoidea, carinis 5 et lineis subtilissimis spiralibus (plerumque 3—6 in quovis interstitio) sculpta, pallide cornea, subdiaphana; spira modice et convexe elevata; anfr. $3\frac{1}{2}$ modice convexi, subangulati, ultimus antice vix solutus; apertura majuscula, pone labrum leviter constricta; labrum modice productum, carinis vix crenulatum; labium liberum, vix reflexum; umbilicus latiusculus, lamella spirali mediocri. — Operc. subauriculatum, laevigatum. — Diverg. 145° ; long. 0,035; lat. max. 0,065; lat. min. 0,055 poll. (Ad.)

*) This shell resembles *S. Gouldianum*, and might be mistaken for the young of that species. But the labrum is thickened as in all mature shells of *Stoastoma* proper. It is most readily distinguished by the peculiarities of the aperture. (Adams l. c.)

**) This shell closely resembles *S. Gouldianum*, and is most readily distinguished by the difference in size. A closer inspection will detect the more essential differences. (Adams l. c.)

Stoastoma Hollandianum Adams in Ann. Lyc. N.-York V. N. 2. p. 65.

— — — *Adams* Contrib. to Conchol. N. 8. p. 149. *)

Habitat in insula Jamaica.

18. *St. Blandianum* Adams.

543

T. perforata, subdiscoidea, sub lente confertim spiraliter striata (striis nonnullis elevationibus), flavido-albicans; spira vix elevata; anfr. $3\frac{1}{2}$ vix convexiusculi, ultimus latus, rotundatus, antice descendens, basi planiusculus; apertura obliqua, semiovalis; perist. simplex, continuum, margine dextro arcuatim dilatato, columellari soluto, basali in laminam parum prominentem continuato. — Diam. maj. $2\frac{1}{4}$, min. 2, alt. $\frac{4}{5}$ mill. (Mus. Cuming.)

Stoastoma Blandianum Adams Monogr. p. 6. **)

— — — *Pfr.* in Zeitschr. f. Mal. 1850. p. 63.

β. Dimidio minor. (Mus. Cuming.)

Habitat in insula Jamaica.

19. *St. Agassizianum* Adams. †

544

T. subdiscoidea, carinis 4 prominentibus, acutis, lineisque paucis spiralibus, elevatis, superis sculpta, cornea, subdiaphana; spira vix elevata; anfr. $3\frac{1}{2}$ planulati, ultimus subtus planulatus, antice rapide descendens, breviterque solutus; apertura vix campanulata; labrum reflexiusculum, rotundatum, non crenulatum; umbilicus mediocris, lamella spirali valde elevata, super umbilicum arcum latum formante. — Diverg. 165° ; long. 0,065; lat. max. 0,118; lat. min. 0,095 poll. (Ad.)

Stoastoma Agassizianum Adams Contrib. to Conchol. N. 9. p. 158. ***)

Habitat in insula Jamaica.

*) This shell much resembles *S. Tappanianum*. It is most readily distinguished by its inferior size, and by the greater number of fine spiral striae. (Adams l. c.)

**) T. subdiscoidea, albida vel cornea, carinis spiralibus exilibus multis ornata; spira paululum elevata; anfr. $3\frac{1}{2}$; apertura campanulata; labro multo producto, vix pectinato; labio multo soluto; umbilico lato, haud profundo, lamella spirali instructo. — Diverg. 150° ; long. 0,64; lat. max. 1,52; lat. min. 1,27 mill. (Adams l. c.)

***) In the only specimen now before me, there is, around the lip within, a deposit which contracts the aperture, and rising over the labium in a rather thin curved lamella, extends over half the entrance of the umbilical arch. (Adams l. c.)

20. **St. Philippianum Adams.**†

T. subdiscoidea, superne modice convexa, laevigata, nitida, pallide cornea, subdiaphana; sutura modice impressa; anfr. $3\frac{1}{2}$ convexiusculi, ultimus supra peripheriam regulariter rotundatus, antice vix solutus; apertura subcampanulata; labrum leviter productum, haud crenulatum; labium superne subsolutum, basi infra anfr. penultimum extensum; umbilicus medio-cris, lamella spirali valde elevata, supra umbilicum arcum latum formante. — Diverg. media 130° ; long. 0,055; lat. max. 0,09; lat. min. 0,075 poll. (Ad.)

Stoastoma Philippianum Adams Contrib. to Conchol. N. 9. p. 158.

Habitat Ackendown in Westmoreland Jamaicae.

II. Trochatella Swainson.

Operculum non spiratum, semiovale, planum, pallidum, magis minusve solidum. Testa trochiformis vel globoso-conica; apertura subtriangulari-semiovalis; columella subplana, callum basalem non emittens, rarius peristomatis margines callo tenuissimo, non diffuso, jungens.

15. *T. pulchella* Gray.

560

T. subgloboso-conica, tenuis, lutea, rufo interrupte fasciata et albido variegata, vix nitidula; spira conica, acuminata; anfr. 5—6 subplani, ad peripheriam undulato-carinati, superne liris elevatis concentricis muniti, ultimus antice non descendens, infra carinam spiraliter confertim striatus; columella brevis, verticalis, dilatata, complanata; apertura ampla, integra, subtriangulari-ovalis; perist. tenue, undique late expansum, margine supero et basali strictiusculis. — Operc. subtriangulare, chartaceum, corneo-albidum. — Diam. maj. $11\frac{1}{2}$, min. 9, alt. 9 mill. (Coll. Nr. 16.)

*) Shell conic above, much flattened beneath, with the periphery very acute and scalloped or imbricate; above irregularly mottled with yellow, green and white; beneath copper red, with the centre pale green; spirally ribbed above, with very fine close spiral striae beneath; spire with the outlines concave near the apex, rectilinear in the rest; apex acute; whorls six, flat or slightly concave; aperture a spherical triangle; labrum moderately thickened and reflected, much advanced above; deposit of the base thin. — Mean divergence 100° , at the apex 80° ; length 0,27; greatest breadth 0,43; least breadth 0,36 inch. This species belongs to *Trochatella*. (Adams l. c.)

Habitat in insula Cuba: Callajabas (E. Otto), Cerro de Cuzco (Delâtre), Trinidad (Lavallée), Matanzas (Bartlett).

9. *H. festiva* Sowerby?

572

T. subglobosa, glabra, solidula, brunnea, rubicundo-strigata, strigis cingulo pallido interruptis; anfract. 4, ultimus maximus, obtuse carinatus; apertura lata, oblonga; labrum incrassatum, reflexum, basi subtuberculatum; callus columellaris latus albus. (Sow. in Beech.) — Diam. 25, alt. 16 mill. (Ex ic.)

- Helicina festiva* Sow. in Zool. of Beech. voy. p. 145. t. 38. f. 23.
 — — Sow. Thes. N. 12. p. 4. t. 1. f. 9. ***)

Habitat . . . ?

Obs. Species dubia, a Cl. Sowerby ex icone solum, ut videtur, descripta. Vix dubium mihi est, speciem a domino Sallé nuperrime ex insula Haiti allatam et ab amicissimo H. Cuming mecum communicatam esse eandem: „t. conoideo-globosa, solida, oblique striata, parum nitens; spira rubicunda, breviter conoidea, acutiuscula; anfr. 5 planiusculi, ultimus magnus, obsolete angulatus, fusco-virens, saturatius radiatus; columella leviter arcuata, callosa, basi subtuberculata, callum crassum album retrorsum emittens; apertura parum obliqua, semiovalis, intus fusco-rubra; perist. album, incrassatum, vix expansiusculum. — Operc. testaceum, margaritaceo-coerulescens. — Diam maj. 21, min. 17, alt. 14 mill. (Coll. N. 24.)“

*) T. depresso-conoidea, crassa, sublaevigata, viridescens vel rubra; spira convexiuscula, conica, apice obtusa; anfr. 5 planis, contiguus; apertura triangulari, lutea; labro incrassato, non reflexo; columella callosa; aperturae angulo columellari fissurato. — Diam. 25, alt. 15 mill. — Cette coquille, la plus grande et la plus belle du genre, plus grande même que l'*H. major* Gray, est remarquable par la fissure de sa columelle et ses bords épaissis et nullement réfléchis, dernier caractère qui la distingue nettement de l'*H. major*. Elle est voisine de l'*H. pulcherrima* Lea de Java, mais diffère de la description de cet auteur. (Orbigny l. c.)

**) T. crassa, conoidea, subcompressa, concentrice substriata; apertura subtriangulari, labio externo vix reflexo; prope columellam sub-emarginato; labio interno expanso, calloso, columella sub-complanata, acuminata; epidermide fusca, viridescens. (Sow. l. c.)

***) T. *H. Sagrae* simili, sed concentrice lirata, interstitiis rubro-lineatis. (Sow. l. c.)

10. **II. silacea Morelet.**

T. conoideo-depressa, solida, oblique profunde et confertim radiato-sulcata, albida, inter costas virens; spira convexo-conoidea, obtusula; anfr. $4\frac{1}{2}$ subplanulati, ultimus peripheria subangulatus, zonaque virenti-fusca pallide marginata cinctus; columella recedens, alba, basi in tuberculum crassum terminata, retrorsum callum emittens crassum, circumscriptum latioreque hyalinum, ad marginem dextrum peristomatis extensum; apertura diagonalis, triangulari-semiovalis; perist. crassum, album, latum, margine supero stricto, sinuato, basali subreflexo. — Operc. testaceum, margaritaceum. — Diam. maj. 20, min. $16\frac{1}{2}$, alt. 12 mill. (Mus. Poey.)

Helicina silacea Morelet Test. noviss. p. 20. N. 48. *)

Habitat in insula Cuba.

11. **II. submarginata Gray.**

T. depresso-conoidea, solida, oblique striatula, lineis impressis concentricis decussata, albida, vel fusco-aurantiaca, nitidula; spira brevis, acutiuscula; anfr. $4\frac{1}{2}$ subplani, ultimus antice vix descendens, medio pallide cingulatus; apertura obliqua, intus albida vel rubella; columella basi breviter dextrorsum arcuata, in tuberculum angustum desinens; perist. rectum, vix incrassatum, marginibus callo tenuiusculo, diffuso junctis, basali plicam distinctam pone columellam immittente. — Operc. *H. Sagraianae*. — Diam. maj. 17, min. 14, alt. 12 mill. (Coll. Nr. 25.)

Helicina submarginata Gray in Zool. Journ. I. p. 68. t. 6. f. 11. **)

— — — *Desh.* in Lam. hist. VIII. p. 162. N. 15.

— — — *Orb.* Moll. Cub. I. p. 244. t. 19. f. 7. 8. ***)

*) T. globoso-depressa, rustice costulata, subtus radiatim decussata, ochraceo-albescens, inter strigas saturatior, zona pallide marginata obscure cincta; anfr. 5 planulati; apertura subtrigona; perist. crassissimum, labiatum, reflexiusculum, nitidum, album, margine externo sinuoso, interno tuberculo columellari munito; ambobus callo crasso, hyalino, late expanso connexis. — Diam. maj. 23, min. 18 mill. (Mor. I. c.)

**) T. depresso-ovata, obscurissime carinata, albido-fusca, concentrice substriata, spira convexa, distanter spiraliter substriata; subtus convexiuscula, laevigata; perist. subincrassato parum reflexo, labiis subincrassatis; aperturæ angulo columellari subemarginato. — Axis $\frac{1}{2}$, diam. $\frac{1}{10}$ poll. — Habitat? (Gray I. c.)

***) T. depressa, crassa, solida, transversim striata, albido-fulva, zona albida cincta; spira convexiuscula, obtusa; anfr. 5 planis, contiguus; apertura semilunari, labro incrassato, non reflexo; columella alba, incrassata;

Helicina microdina Morelet Testac. noviss. II. p. 18. N. 124.

Habitat vulgaris in prov. Vera Paz Guatemalae.

Obs. „Primo aspectu *H. rupestri* Pfr. congruit, quamvis in univ. sum ab ea dissimilis.“

§. 5.

598

35. **H. beryllina Gould.**†

T. solidula, depresso-conica, infra convexa, ad peripheriam obtuse angulata, polita, albido-virens; spira anfr. 5 planulatis, ultimo cite crescente; sutura linearis; apertura magna, transverse semi-elliptica; perist. simplex; callus columellaris late expansus. — Lat. $\frac{1}{2}$, alt. $\frac{3}{8}$ poll. (G.)

Helicina beryllina Gould in Proc. Bost. Soc. 1847. p. 202; Exped. shells p. 37. Ed. 1851. p. 95. f. 111. **)

Habitat in insulis Feejee.

599

36. **H. platychila Mühlfeldt.**

T. conoideo-semiglobosa, opaca, subnitida, laevis, virenti-flava vel rubella; spira conica, mucronulata; sutura plana;

*) A very delicate species, and one of the smallest known, and principally remarkable for its variable coloring (Gould l. c.)

**) Rather large as to size, and remarkable for its delicate beryl-green tint and polished surface. The outer whorl enlarges very rapidly. In form it resembles *H. similis* Sow (Gould l. c.)

anfr. $5\frac{1}{2}$, supremi planulati, ultimus peripheria magis minusve angulatus, basi planiusculus; apertura obliqua, subtriangularis; columella brevis, basi tuberculum in callum basalem retrorsum abiens formans; perist. simplex, breviter expansum. — Operc. immersum, tenue, corneum, distincte concentrice striatum. — Diam. maj. 10, min. 9, alt. $6\frac{1}{2}$ mill. (Coll. Nr. 36.)

Helix platychilos Mühlf. in Verhandl. Berl. Ges. I. 4. p. 219. t. 3. f. 11.

Habitat in insulis Portorico et Martinique.

Obs. Species et magnitudine et coloribus maxime variabilis.

97. *H. versicolor* Pfr.

660

T. depressa, tenuis, laevigata, citrino et viridi variegata, propè verticem purpurea; spira parum elevata, obsolete papillata; anfr. 4½, planiusculi, rapide accrescentes, ultimus latus, subdepressus, antice vix descendens; apertura diagonalis, subtriangulàri-semiovalis; columella brevissima, callum crassum, semicircularem, nitidum, album emittens; perist. breviter expansum, margine basali subreflexo, immediate in columellam continuato. — Operc. tenue, submembranaceum, castaneum,

*) T. orbiculato-convexa, depressa, tenui, pellucida, albido-cornea, rufo fasciata; labro margine interiore albo, subreflexo. — Diam. 3''' — Portorico. (Lam. l. c.)

**) T. depresso-ovata, albida, laevis, tenuis, pellucida; supra convexa, interrupte rufo-fasciata; subtus subconvexa, rufo lineata, peristomate incrasato, reflexo, albo, columella labiisque callosis, albis; operculo corneo. (Gray l. c.)

***) Petite coquille très mince, pellucide, très fragile, ovale, déprimée, fort convexe en dessus, moins bombée en dessous, où elle est légèrement déprimée. Son ouverture est oblique, semilunaire, à péristome épais, blanc, réfléchi en dehors. La columelle est blanche, calleuse à la base, très lisse et très brillante. En dessus, cette coquille est ornée de fascies, de taches subarticulées rousses, ou brunes et blanches; sur le pourtour du dernier tour, une de ces zones est plus large, plus constante et plus blanche; on y voit des linéoles continues, rougeâtres. Cette jolie coquille, qui a à peine trois lignes de diamètre, vient de Porto-Ricco. (Desh. l. c.)

†) T. depressa, laevi; anfractu ultimo magno; labio externo subexpanso; columella obliqua, confluenti. (Sow. l. c.)

††) T. orbiculato-convexiuscula, longitudinaliter substriata, albida, fascia lata, rufa; apertura semirotonda; callo columellari coarctato; labro simplici, acuto. — Alt. 2, lat. 3''' — Habitat? (Menke l. c.)

margine columellari et nucleo pallidis. — Diam. maj. 8, min. $6\frac{2}{3}$, alt. $5\frac{1}{2}$ mill. (Mus. Cuming.)

Helicina versicolor Pfr. in Zeitschr. f. Malak. 1850. p. 77.

Habitat in insula Haiti (Sallé).

661

98. *H. Dysoni* Pfr.

T. orbiculato-conoidea, solidiuscula, striatula, nitidula, carnea, superne fasciis 2 angustis, saturatoribus ornata; spira elata, obtusiuscula; anfr. 5 convexiusculi, lente accrescentes, ultimus antice vix descendens, basi subplanatus; apertura obliqua, semiovalis, altior quam lata; columella brevis, basi subtruncata, callum albidum, linea subimpressa circumscriptum, emittens; perist. simplex, brevissime reflexiusculum, margine utroque leviter curvato. — Diam. maj. 8, min. 7, alt. $5\frac{1}{2}$ mill. (Coll. Nr. 63.)

Helicina Dysoni Pfr. in Proc. Zool. Soc. 1848. p. 121.

— — *Chemn.* ed. II. N. 63. p. 49. t. 3. f. 36 — 39. t. 8. f. 24 — 29.

β. Minor, saturate carnea, superne fasciis 2 angustis rubris et ad peripheriam 1 albida cincta; diam. maj. 7, min. $6\frac{1}{4}$, alt. $4\frac{1}{2}$ mill. (Mus. Cuming.)

γ. Fulvo-rubella, superne fasciis 2 angustis saturatoribus ornata.

δ. Minor, flava, superne fasciis 2 angustis fulvis, ad peripheriam 1 albida ornata; diam. maj. 6, min. $5\frac{1}{3}$, alt. $4\frac{1}{3}$ mill.

Habitat in Cumana; varr. in Honduras (Dyson).

662

99. *H. sublaevigata* Pfr.

T. conoideo-depressa, solidula, sublaevigata, nitidula, unicolor rubella vel albida, subtus violaceo-zonata; spira breviter conoidea, vertice obtusulo; anfr. 5 vix convexiusculi, ultimus lator, peripheria obsolete angulatus; apertura diagonalis, subsemiovalis; columella brevis, simplex, callum crassiusculum, circumscriptum retrorsum emittens; perist. simplex, breviter expansum, margine basali fere rectilineari, ad columellam subdentato. — Operc. tenue, corneum, immersum. — Diam. maj. 8, min. $6\frac{1}{2}$, alt. 5 mill. (Mus. Cuming.)

Helicina sublaevigata Pfr. in Proc. Zool. Soc. 25 Maj. 1852.

Habitat in insulis Novis Hebridis.

663

100. *H. diaphana* Pfr.

T. subconoideo-depressa, tenuis, oblique striatula, diaphana, nitidula, fulvo-lutescens; spira subelevata, apice obtusa; anfr. 4

planiusculi, ultimus obsolete subangulatus; columella brevissima, basi subnodosa, in callum circumscriptum, sub lente granulatum retrorsum dilatata; apertura subobliqua, semilunaris; perist. simplex, breviter expansum, margine basali leviter arcuato, in nodulum columellarem sensim transeunte. — Operc. tenue, immersum, lutescens. — Diam. maj. 5, min. $4\frac{3}{4}$, alt. $3\frac{1}{3}$ mill. (Mus. Cuming.)

Helicina diaphana Pfr. in Proc. Zool. Soc. 1850. p. 98.

Habitat in Honduras (Dyson).

101. II. Küsteriana Pfr.

664

T. depressa, tenuiuscula, oblique striata et lineis elevatis concentricis, distantioribus brevissime pilosis munita, diaphana, pallide cornea; spira brevis, obtusa; anfr. vix $3\frac{1}{2}$ convexiusculi, ultimus depressus, antice non descendens, basi parum convexus; apertura obliqua, triangulari-semiovalis; columella brevissima, simplex, retrorsum in callum semicircularem, vitreum, antice in peristoma simplex, tenue, expansiusculum abiens. — Operc.? — Diam. maj. $4\frac{2}{3}$, min. 4, alt. $2\frac{1}{2}$ mill. (Coll. Philippi.)

Helicina Küsteriana Pfr. in Zeitschr. f. Malak. 1848. p. 88.

— — Chemn. ed. II. N. 64. p. 50. t. 9. f. 22—25.

Habitat in insula Tahiti.

102. II. Louisiadiensis Forbes.

665

T. conoideo-depressa, solidiuscula, nitida, sub lente concentrice striata, rubello-cornea; spira conoideo-convexa, acutiuscula; anfr. 4 convexiusculi, ultimus subdepresso-rotundatus, basi pone columellam brevem subexcavatus, leviter callosus; apertura obliqua, subtriangulari-semiovalis; perist. simplex, tenue, undique breviter expansum. — Operc. subtriangulare, pallidum. — Diam. maj. $4\frac{1}{2}$, min. $3\frac{2}{3}$, alt. $2\frac{3}{4}$ mill. (Mus. Cuming.)

Helicina Louisiadiensis Forbes in Voy. Rattlesnake. App. p. 382. t. 3. f. 5.

Habitat „Round Island in Coral Haven“ Archipelagi Louisiadarum (Macgillivray).

§. 10.

103. II. Sowerbyana Pfr.

666

T. depresse trochiformis, tenuiuscula, lineis impressis spiraliter sulcata, alba; spira conica, acutiuscula; anfr. 6 pla-

nusculi, ultimus subcarinatus, basi convexiusculus; apertura parum obliqua, subtriangularis; columella tenuis, basi nodifera; perist. simplex, angulatim expansum, margine supero sinuato; callus basalis tenuissimus. — Operc.? — Diam. maj. 21, min. 17, alt. 14 mill. (Mus. Cuming.)

Helicina Sowerbyana Pfr. in Proc. Zool. Soc. 1848. p. 124.

— — Chemn. ed. II. N. 65. p. 50. t. 6. f. 9. 10.

Habitat Guatemala (Lattre).

667

104. *H. occidentalis* Guilding.

T. depressa, tenuiuscula, lineolis obliquis subgranulata, albo-flavida, rufo nebulosa et variegata; spira brevis, conoidea, submucronata; anfr. 6 planiusculi, ultimus depressus, angulatus, basi fere planus; apertura perobliqua, triangularis; columella brevis, basi subtuberculata, retrorsum in callum diffusum dilatata; perist. expansum, reflexum, margine supero depresso. — Operc. semiovale, nigro-castaneum. — Diam. maj. 19, min. 15, alt. $10\frac{1}{2}$ mill. (Mus. Cuming.)

Helicina fasciata Guild. in Linn. Trans. XIV. 2. p. 339. Nec Lam.

Habitat Honduras; in provinciis Peten et Vera Paz (Morelet).

106. **H. goniostroma Sowerby.** †

669

T. subglobosa, laevis, solidula, obscure brunnea, prope suturam late albo-cingulata; spira depressiuscula, conica; apertura lata, ampla, carina obtusa anfractus ultimi angulata; labrum deorsum productum, album. (Sow. l. c.) — Diam. 12, alt. 9 mill. (Ex ic.)

Helicina goniostroma Sow. in Beech. voy. Zool. p. 145. t. 38. f. 21.

Habitat . . . ?

107. **H. lutea Lesson.** †

670

T. orbiculata, convexa, solida, crassa, superne minutim striata, aurea; spira parum elata; anfractus ultimus globosus, medio subcarinatus; apertura obliqua, semicircularis, intus nitide alba; columella alba, sinuata („épatée“); perist. simplex, liberum. — Diam. 5, alt. 3 lin. (Less. l. c.)

Helicina lutea Less. Voy. Coquille p. 350. t. 13. f. 10.

Habitat Port-Dorey Novae Guineae.

108. **H. rotella Sowerby.** †

671

T. laevis, angulata, vix carinata; labium externum reflexum; labium internum expansum; columella subangulata. (Sow.) — Diam. 11, alt. 7 mill. (Ex ic.)

Helicina rotella Sow. Thes. N. 57. p. 12. t. 3. f. 135. 136.

Habitat . . . ?

Obs. Iconi praecedentis persimilis videtur.

*) T. orbiculato-depressa, conoidea, obtuse carinata, colore varia, saepius citrina, anfractu ultimo purpurascente; anfr. 7 planulati, minute striati, lineolis remotis concentricis impressi; columella brevissima, callo subprominulo, replicato, appresso munita; apertura triangularis, marginibus pallidioribus, reflexis. — Diam. maj. 15, min. 12 mill. (Morelet l. c.)

672

109. **H. Gouldiana Forbes. †**

T. depresso-globosa, superne subconica, orbicularis, obsolete subangulata, flava seu rufa, spiraliter striata; spira prominens; anfr. 5 planati; basis imperforata; apertura sublunata, inferne angulata; perist. incrassatum, subreflexum, album. — Diam. maj. 6, min. $5\frac{1}{4}$, alt. $4\frac{1}{2}$ mill. (Forb.)

Helicina Gouldiana Forbes in Voy. Rattlesnake. App. p. 382. t. 3. f. 3.

Habitat „Two Isles, N. E. coast“ Australiae (Macgillivray).

* * *

673

110. **H. Lindeni Pfr.**

T. globoso-conica, tenuiuscula, subtilissime striolata et punctata, subdiaphana, pallide straminea vel carnea; spira conica, acutiuscula; anfr. 6 vix convexiusculi, ultimus inflatus, obsolete angulatus, antice non descendens; apertura parum obliqua, semiovalis, altior quam lata; columella leviter arcuata, extrorsum in denticulum desinens, callum emittens exiguum, tenuem; perist. breviter expansum, reflexiusculum. — Operc.? — Diam. maj. $11\frac{1}{2}$, min. 10, alt. $8\frac{1}{3}$ mill. (Mus. Cuming.)

Helicina Lindeni Pfr. in Proc. Zool. Soc. 1848. p. 123.

— — *Chemn.* ed. II. N. 67. p. 52. t. 8. f. 22. 23.

Habitat Tapinapa, Mexico (Linden).

674

111. **H. Salleana Pfr.**

T. conoideo-subdepressa, tenuis, striatula et obsolete subgranulata, diaphana, nitida, purpurascens-fusca; spira conoidea, acutiuscula; anfr. fere 5 convexiusculi, ultimus latior, peripheria subangulatus; apertura parum obliqua, subtriangularis; columella substricta, breviter recedens; perist. tenue, marginibus callo basali lato semiovali junctis, supero expansiusculo, basali in limbum latum, membranaceum, nigro-rufum reflexo, cum columella angulum formante. — Operc. terminale, subtriangulare, albidum. — Diam. maj. 9, min. $7\frac{1}{3}$, alt. $5\frac{1}{2}$ mill. (Mus. Cuming.)

Helicina Salleana Pfr. in Proc. Zool. Soc. 9 Mart. 1852.

Habitat in insula Haiti (Sallé).

675

112. **H. Columbiana Philippi.**

T. conica, solidula, confertissime concentrice striata, nitidula, superne carnea, interdum fusco late unizonata, basi lutes-

cens; spira regulariter conica; anfr. 5 convexiusculi, ultimus unicarinatus, non descendens; apertura subangulato-semicircularis; columella brevis, basi attenuata, lineola verticali impressa a callo basali albo, nitido distincta; perist. incrassatum, album, breviter expansum, marginibus arcuatis. — Operc. semicirculare, nitide castaneum. — Diam. maj. 11, min. $9\frac{1}{2}$, alt. 8 mill. (Coll. Philippi.)

Helicina Columbiana Phil. in Zeitschr. f. Malak. 1847. p. 126. *)

Habitat . . . ?

684

121. *H. Moreletiana* Pfr.

T. depresso conoidea, tenuiuscula, lineis elevatis spirilibus minute sculpta, opaca, rubello-flavida; spira brevis, conoidea, apice acuta; anfr. 5 plani, ultimus acute carinatus, non descendens, basi convexus; apertura perobliqua, triangularis; columella brevis, arcuata, callum crassum, album, circumscriptum emittens; perist. subincrassatum, album, margine supero late expanso-reflexo, basali leviter arcuato, late reflexo. — Operc.? — Diam. maj. $21\frac{1}{2}$, min. 18, alt. 10 mill. (Mus. Cuming.)

*) T. parva, depressa, subangulata, rubra vel straminea; margine crasso, effuso; labio interno calloso; columella ad basin subemarginata. — Alt. 0,10; lat. 0,15 poll. (Sow. l. c.)

Helicina Moreletiana Pfr. in Zeitschr. f. Malak. 1850. p. 191.

— — Chemn. ed. II. N. 93. t. 10. f. 1. 2.

Habitat . . . ?

122. **H. Kieneri Pfr.**

685

T. conoidea, tenuiuscula, oblique striata, lineis concentricis confertis subtilissime decussata, albida, fusco-violaceo-marmorata; spira convexo-conoidea, acuta; anfr. $5\frac{1}{2}$ vix convexiusculi, ultimus compresse carinatus, basi convexior; columella recedens, planata, superne impressa, basi incrassata in callum basalem tenuem abiens; apertura obliqua, integra, semiovalis, altior quam lata; perist. simplex, tenue, late expansum. — Operc.? — Diam. maj. 16, min. 13, alt. $11\frac{1}{2}$ mill. (Mus. Cuming.)

Helicina Kieneri Pfr. in Proc. Zool. Soc. 1848. p. 122.

— — Chemn. ed. II. N. 72. p. 54. t. 6. f. 17.

Habitat Caraccas (Sallé).

Obs. Species ad *H. neritellam* formatione columellae prope accedens, sed sculptura et carina discrepans.

123. **H. Moquiniana Récluz. †**

686

T. trochiformis, carinata, albo-lutescens, aurantio punctata et fasciata; anfr. 6 convexo-depressi, supremi fulvi, laevigati, 2 infimi transversim regulariter striati, cum interstitiis obscure subgranosis, infimus maculis parvis biserialiter pictus, carinatus; inferna facies convexa, concentrice striata, luteola, radiis obliquis, arcuatis punctis aurantiis ornata; labro crasso, reflexo. — Operc. testaceum, extus sanguineum. — Diam. 15, alt. 11 mill. (Récl.)

Helicina Moquiniana Récluz in Journ. Conch. 1851. II. p. 212. t. 5. f. 8.

Habitat in insulis Salomonis.

123 a. **H. straminea Morelet. †**

686a.

T. campanulato-conica, tenuis, sub lente lineolis spiralibus et strigis incrementi decussata; anfr. 7 planulati, priores sutura profunda contabulati, citrini, ultimus pallidus, acute carinatus, basi parum convexus; carina albo marginata, fascia lutea subtus adnata; apertura obliqua, subtrigona; columella basi angulata, callosa; perist. subincrassatum, reflexiusculum. — Alt. 8, diam. 8 mill. (Mor.)

Helicina straminea Morelet Testac. noviss. II. p. 18. N. 125.

Habitat in montibus Guajaibon insulae Cubae.

*

*

*

687

124. **H. caracolla Moricand.**

T. depressa, lenticularis, tenuis, concentrice confertim striata (striis spiralibus nonnullis elevatis), pellucida, citrina vel purpurascens; spira vix elevata, acutiuscula; anfr. $4\frac{1}{2}$ convexiusculi, ultimus acute carinatus, antice non descendens; apertura perobliqua, triangularis; columella brevis, superne in callum basalem tenuem dilatata, basi immediate in peristoma reflexum, albolabiatum abiens. — Diam. maj. 16, min. 13, alt. 8 mill. (Coll. Nr. 67.)

Helicina caracolla Moric. Mém. Genève VII. p. 444. t. 2. f. 24. 25.

β. Minor: diam. maj. 12, min. 10, alt. 7 mill.

γ. Minima: diam. maj. $9\frac{1}{2}$, min. 7, alt. $5\frac{1}{2}$ mill.

Habitat in insulis Philippinis Bohol, Siquijor, Zebu (H. Cuming).

127. ***H. oxytropis* Gray.**

690

T. depresso-turbinata, solida, carinata, rugoso-striatula, opaca, pallide flava; spira breviter conoidea, apice acutissima; sutura marginata; anfr. $5\frac{1}{2}$ planiusculi, ultimus compresse et acute carinatus, basi convexiusculus; apertura perobliqua, lunari-subtriangularis; columella declivis, callum tenuem retrorsum emittens, basi extus subangulata; perist. acutum, breviter expansiusculum. — Operc. tenue, testaceum, subtrapezium. — Diam. maj. 12, min. 10, alt. 5 mill. (Mus. Cuming.)

Helicina oxytropis Gray in Beech. Voy. Zool. p. 146. t. 38. f. 24. **)

— *oxystoma* Sow. Thes. N. 50. p. 10. t. 3. f. 139. ***)

Habitat . . . ?

crassiusculo, irregulariter quadrilaterali; epidermide aliquando per adhaesionem rupium fragmentorum in carinam latam praeruptam producta. — Alt. 0,45; long. 0,75 poll. (Sow. l. c.)

*) T. plus minusve depressa, concentrice leviter striata, angulari, acutissime carinata, infra angulos paululum complanata; apertura triangulari; labio interno tenuissimo; columella subcomplanata, ad basim subundata; labio externo acuto, valide reflexo, expanso, super angulum subdepresso. (Sow. l. c.)

**) T suborbiculari, depressiuscula, glabra, carinata, pallide flava; spira depresso-conica; anfr. 4 acute carinatis; apertura ampla, margine externo acute angulata, alba; callo columellari flavo. (Gray l. c.)

***) T. *H. acutissimae* simili, sed crassiori; labio interno valido. — Bahia. (Sow. l. c.)

691

128. **H. pallida Gould. †**

T. lenticularis, solidiuscula, luteo-cinerea, inaequaliter striata, epidermide tenuissima induta; spira depressa; anfr. 5 carinati, planati; apertura semilunaris, ad columellam callosa; labrum modice reflexum. — Lat. $\frac{3}{10}$, alt. $\frac{3}{10}$ poll. (G.)

Helicina pallida Gould in Proc. Bost. Soc. 1847. p. 202; Exped. shells p. 37. *) Ed. 1851. p. 96. f. 113.

Habitat in insulis Feejee.

692

129. **H. acuta Pfr.**

T. depresso-conica, solidula, oblique confertim striata et subgranulata, opaca, lutea, superne rubro-unifasciata; spira conoidea, acuta, mucronata; anfr. fere 6 planiusculi, acute carinati, ultimus antice vix descendens, basi planiusculus; apertura perobliqua, subtriangularis; columella subverticalis, brevissima, basi angulata, superne in callum basalem tenuissimum abiens; perist. simplex, aurantiacum, margine supero subrecto, basali subincrassato. — Operc.? — Diam. maj. 15, min. $12\frac{2}{3}$, alt. $7\frac{1}{2}$ mill. (Mus. Cuming.)

Helicina acuta Pfr. in Proc. Zool. Soc. 1848. p. 119.

Habitat in insula Jamaica (Adams).

2. *A. hirsuta* Adams. †

713

T. depresso-globosa, tenuiuscula, fusco-rubra, striis incrementi levibus sculpta, epidermide fusca hirsuta (pilis longis 6-seriatis) induta; apex obtusiusculus, submucronatus; spira curvilinearis; anfr. fere 5, subplanulati; apertura majuscula, semielliptica; labrum tenuiusculum, acutum, valde reflexum, postice canalem formans; incisura non valde profunda, sed lata. — Diverg. media 110°; lat. max. 0,59; lat. min. 0,48; alt. 0,4 poll. (Ad.)

*) Heliciform; aperture with an open slit, or narrow fissure at the base. Types: *H. major* Gray, *H. submarginata* Gray. (Swains. l. c.)

**) T. depresso-ovata subglobosa, fuscescens, laevis; spira convexa; subtus convexiuscula, pallida; perist. incrassato, albo, reflexo; angulo columellari obtuse emarginato; labiis incrassatis, pallidis. — Axis $\frac{1}{2}$, diam. $\frac{3}{4}$ poll. (Gray l. c.)

***) T. globosa, laevi, subtenui, anfractu ultimo magno; apertura semilunari; labio externo reflexo, expanso; prope columellam valde emarginato; labio interno subtus leviter calloso; columella parva; operculo calcareo. (Sow. l. c.)

Helicina hirsuta Adams in Ann. Lyc. N.-York V. p. 49; et Contrib. to Conch. N. 8. p. 133. *)

Habitat in insula Jamaica.

714

3. *A. consanguinea* Adams. †

T. subglobosa, crassiuscula, striis incrementi distinctis notata, epidermide subhirsuta induta, saturate rufa; spira curvilinearis, apice obtusa; anfr. 5 modice convexi; apertura semiorbicularis; labrum superne sinuosum, modice incrassatum, acutum, praeter extremitates bene reflexum; incisura lata et brevis. — Diverg. media 110°; lat. max. 0,6; lat. min. 0,5; alt. 0,45 poll. (Ad.)

Helicina consanguinea Adams in Ann. Lyc. N.-Y. V. N. 2. p. 50; Contr. to Conch. N. 8. p. 134. **)

Habitat Westmoreland insulae Jamaicae.

715

4. *A. microstoma* Adams. †

T. globoso-conica, crassiuscula, striis incrementi levibus seriebusque paucis spiralibus punctorum notata, fusca, juxta suturam et ad peripheriam pallida; apex obtusus; spira magis minusve, haud uniformiter, curvilinearis; anfr. vix 5 modice convexi, ultimus subtus subplanulatus; apertura semielliptica, superne et inferne compressa, lateraliter dilatata; labrum sinuatum, bene expansum et praeter extremitates reflexum; incisura

*) Shell depressed globose, rather thin: brownish red, with an hirsute brown epidermis, having long hairs in six spiral lines, of which one is next below the suture and the others are on the middle and lower parts of the last whorl: with the striae of growth lightly impressed: apex rather obtuse, slightly mucronate: spire with the outlines much curved: whorls nearly five, slightly planulate, with a well impressed suture: aperture rather large, semielliptical; lip rather thin and sharp, but well reflected so as to form a canal behind; with the slit not very deep, but wide. — The slit has about the same proportions as in *H. Hollandi*, having less depth and a greater width than in *H. pallida* and *H. Brownii*. Except in its greater size, it very closely resembles the former species, which however wants the spiral lines of long hairs in the epidermis. The operculum of this species is much smoother. (Adams l. c.)

**) Shell subglobose, moderately thick: dark brownish red, with the lip white; with a somewhat hirsute epidermis, having the projecting points spirally arranged: with the striae of growth quite distinct: apex obtuse: spire with the outlines much curved: whorls five, moderately convex, with a well impressed suture: aperture semiorbicular; lip sinuous above, moderately thickened and sharp, but well reflected except at the extremities; with the slit broad and shallow. In most characters the species is intermediate between *H. hirsuta* and *albolabris*. (Adams l. c.)

latiuscula, parum profunda. — Diverg. media 60°; lat. max. 0,65; lat. min. 0,52; alt. 0,4 poll. (Ad.)

Helicina microstoma Adams in Ann. Lyc. N.-York V. N. 2. p. 51 et Contr. to Conchol. N. 8. p. 135. *)

Habitat in insula Jamaica.

5. *A. Gossei* Pfr.

716

T. depresso-globosa, solida, pustulis seriatis subasperata, nitidula, fuscido-rubra; spira convexa; anfr. 4½ parum convexi, ultimus rotundatus; apertura triangulari-semiovalis, intus carnea, nitida; columella basi truncata, retrorsum in callum crassum carneum abiens; perist. subincrassatum, expansum, juxta columellam vix incisum. — Operc.? — Diam. maj. 19, min. 15½, alt. 13½ mill. (Mus. Cuming.)

Helicina Gossei Pfr. in Proc. Zool. Soc. 1848. p. 122.

— — Chemn. ed. II. N. 29. p. 28. t. 6. f. 11. 12.

Habitat in insula Jamaica (Gosse).

Obs. Differt ab *A. majore* forma magis rotundata (ratione diametrum et altitudinis), epidermide pustulosa, basi columellae a peristomate emarginatione levi separata.

6. *A. palliata* Adams.

717

T. globoso-conoidea, solida, fusco-rubra, epidermide dense brevipilosa induta; spira conoidea, acutiuscula; anfr. 5½ vix convexiusculi, ultimus antice deflexus; apertura diagonalis, triangulari-semiovalis; columella brevis, in dentem antrorsum arcuatum desinens, fissura profunda, angusta, strictiuscula a perist. subincrassato, carneo, expanso separata; callus basalis semicircularis, medio crassus, aurantiacus. — Operc. immersum, solidum, semiovale, opalinum. — Diam. maj. 15½, min. 13, alt. 11½ mill. (Coll. Nr. 79.)

*) Shell globose conic, moderately thickened: brown, shaded off to a smoky white along the suture and on the periphery of the last whorl: with rather light striae of growth, in which are a few spiral series of punctures: apex obtuse: spire with the outlines more or less and not uniformly curvilinear: whorls rather less than five, moderately convex, with a well impressed suture; last whorl subplanulate beneath: aperture semi-elliptical, compressed above and below, laterally dilated; with the lip sinuate, well expanded and reflected except at the extremities; with the slit not very deep, rather wide. — The slit is about as deep as in *H. consanguinea*, but the sides are less divergent. — In form it approaches more nearly to *H. ampliata* and *H. Jamaicensis*, than any of the group. (Adams l. c.)

Helicina palliata Adams Contrib. to Conch. N. 1. p. 13. *)
 β. Peristomate extus intusque perincrassato.

Helicina palliata var. *labiosa* Adams Contr. N. 8. p. 134.

721

T. orbiculato-conoidea, tenuis, sub lente granulata, pellu-
cida, nitida, rubello-succinea, seriebus pilorum nigrorum (praeter
anfr. ultimum obsoletis) munita; spira breviter conoidea, acu-

*) Shell brown or lemon yellow, very solid, outer lip very thick and
always lemon yellow; in other characters like *H. albolabris*, of which it
may possibly be a variety with a greater divergence. The epidermis is very
finely but not densely hirsute. — Mean divergence 123°; length 0,39; great-
est breadth 0,67; least breadth 0,53 inch. (Adams l. c.)

**) Shell with a notch like that of *H. maxima*, but the notch is rather
large proportionally; in other respects similar to *H. Brownii*, but the
whorls are less convex, and the last one much depressed, and the shell
more solid, with a greater divergence. — Mean divergence 110°; length
0,39; greatest breadth 0,64; least breadth 0,5 inch. (Adams l. c.)

***) Species similar to *H. Brownii*, but the shell is much smaller
and thinner; it is chiefly distinguished by the incision being only half as
deep, and by the produced columella, which has no impressed line nor
groove, although slightly raised at the margins. — Mean divergence 105°;
length 0,23; greatest breadth 0,41; least breadth 0,32 inch. (Adams l. c.)

tiuscula; anfr. fere 5 parum convexi, ultimus magnus, vix descendens; apertura parum obliqua, semiovalis; columella brevissima, verticalis, basi denticulum acutum formans, callum emittens tenuem, granulosum; perist. tenue, breviter expansum, margine supero repando, basali ad columellam emarginato. — Operc. solidum, testaceum, rubellum. — Diam. maj. 8, min. $6\frac{1}{2}$, alt. $5\frac{1}{3}$ mill. (Coll. N. 83.)

**) Shell globose-conic: shining, reddish brown, with the lip and callus

13. **A. megastoma Adams.**

724

T. depresso-globosa, (sub epidermide fasciatim interrupta velutina) laevigata, nitida, fuscula; spira depresso-conoidea; anfr. $4\frac{1}{2}$ parum convexi, ultimus magnus, basi convexus; apertura parum obliqua, semicircularis; columella breviter recedens, desinens in tuberculum exiguum, incisura levi a peristomate separatum; callus basalis tenuis; perist. subincrassatum, breviter expansum, album. — Operc. solidiusculum, pallidum. — Diam. maj. 8, min. $6\frac{1}{2}$, alt. 5 mill. (Coll. Nr. 85.)

Helicina megastoma Adams Contrib. to Conch. N. 1. p. 14. *)

β. Testa tenuiore, pellucida, epidermide distinctiore:

Helicina affinis Adams in Proc. Bost. Soc. II. 1846. p. 102. **)

Habitat in insula Jamaica.

14. **A. macilenta Adams.**

725

T. depressa, subdiscoidea, tenuis, subtilissime punctulato-striata, pallide fuscula; spira parum elevata, vix acuminata; anfr. $4\frac{1}{2}$ vix convexiusculi, ultimus latior, basi planiusculus; apertura diagonalis, subsemicircularis; columella brevis, in denticulum antrorsum curvatum, extus incrassatum desinens, fissura angusta, profunda, arcuata a perist. simplice, breviter expanso separata; callus basalis tenuis. — Operc.? — Diam. maj. $7\frac{1}{3}$, min. 6, alt. $3\frac{3}{4}$ mill. (Mus. Cuming.)

Helicina macilenta Adams Contrib. to Conch. N. 1. p. 13. ***)

Habitat in insula Jamaica.

yellowish-white: with excessively fine striae of growth, and very lightly impressed microscopic spiral striae: apex subacute: spire well elevated, with the outlines rather convex: whorls four and one-half, rather convex, with a well impressed suture: aperture rather large, semicircular, with the notch at the base of the columella scarcely perceptible or wanting; labrum moderately reflected and thickened. Mean divergence about 120° ; height 0,2; greatest breadth 0,285; least breadth 0,24 inch. — Var. *intermedia*: with a very small, but distinct obtuse notch; the spire is less elevated, and the shell is larger and thinner. It is intermediate between the type of the species and *H. solitaria*. Height 0,24; greatest breadth 0,34; least breadth 0,29 inch. (Adams l. c.)

*) Shell globose conic, smooth and shining, rather thick, yellowish brown; spire with very convex outlines; whorls four and one-half, a little flattened; last whorl very large and high, with corresponding size of the aperture, which is quite exactly semicircular; labrum moderately reflected and thickened; columella and adjacent part of the last whorl bent into the plane of the aperture; the columella is produced into a very minute tubercle. — Mean divergence 108° ; length 0,2; greatest breadth 0,33; least breadth 0,25 inch. (Adams l. c.)

**) *H. solitariae nob. affinis*, sed testa spira conica haud convexa, instructa; labro reflexo, infra angulato, haud scisso. — Jamaica. (Adams l. c.)

***) Shell rather small and thin, subdiscoidal, flattened beneath; pale

15. *A. hispida* Pfr.

T. globuloso-depressa, tenuis, rufa, pilis brevibus confertis hispida; spira vix elevata, subacuminata; anfr. $4\frac{1}{2}$ convexiusculi, sensim accrescentes, ultimus basi convexiusculus; apertura parum obliqua, semiovalis; columella brevissima, basi in dentem recurvatum, liberum terminata; perist. subsimplex, vix expansiusculum, intus album, margine supero sinuoso, basali a dente columellari incisura acuta separato; callus basalis tenuissimus. — Operc. submembranaceum, corneum. — Diam. maj. 6, min. $5\frac{1}{4}$, alt. 4 mill. (Coll. Nr. 86.)
